Thomas Griffith,Juliet Brosing,2011-01-13 The Physics of Everyday Phenomena Seventh Edition introduces students to the basic concepts of physics using examples of common occurrences in everyday life Intended for use in a one semester or two semester course in conceptual physics this book is written in a narrative style frequently using questions designed to draw the reader into a dialogue about the ideas of physics This inclusive style allows the book to be used by anyone interested in exploring the nature of physics and explanations of everyday physical phenomena Beginning students will benefit from the large number of student aids and the reduced math content Professors will appreciate the organization of the material and the wealth of pedagogical tools      *Being and Becoming Scientists Today* Susan A. Kirch,Michele Amoroso,2016-02-10 Can I contribute to science Do I like to work on the problems of science How do scientists know what they know Would I like to be become a scientist These are questions that interest new science students The authors provide teachers with an approach to foster and answer these questions by concentrating on learners and learning They argue that students are typically taught from a disciplinary perspective of science Using this lens students are viewed as people who need to learn a particular canon of information methods and ways of knowing about the world a perspective that may be useful for practicing scientists but not ideal for young learners In this disciplinary approach to science education there is little room for development as a scientist In contrast the approach championed by Kirch and Amoroso places learner questions about the world at the

forefront of teaching and learning and treats science as a system of human activity The historical explorations theoretical insights and practical advice presented here are appropriate for all ages and educational settings In Being and Becoming Scientists Today the authors provide new tools for thinking about science ideas for how to reveal the multiple stories of knowledge production to learners and approaches to teaching science as a collective process rather than a series of contributions made by famous individuals In these ways the authors promote the idea that all science learners contribute to the science in our lives
