

**Question:**

A mass of 2.0 kg is attached to the end of a light cord to make a pendulum 5.0 meters in length. The mass is raised to an angle of  $53^\circ$  relative to the vertical, as shown, and released. The speed of the mass at the bottom of its swing is:

- a. 60 m/s
- b. 7.7 m/s
- c. 40 m/s
- d. 6.3 m/s
- e. 10 m/s

©2009, Richard White. LearnAPphysics.com

**Answer:**

The correct answer is *d*. This is a conservation of energy problem, with the gravitational potential energy  $U$  of the pendulum bob converted to kinetic energy  $K$  as it swings down. Let's consider the lowest position of the pendulum to be  $h = 0$ :

$$U_i + K_i = U_f + K_f$$

$$mgh + 0 = 0 + \frac{1}{2}mv^2$$

$$v = \sqrt{2gh}$$

We can find the height of the pendulum bob relative to the bottom of its swing by using trigonometry. The length of the short side of the triangle (shown in red) is  $L \cos 53^\circ$ . The height  $h$  is the full length  $L$  less this leg of the triangle.

$$h = L - L \cos \theta = 5 - 5 \cos 53^\circ = 2\text{ m}$$

We can then use this information in our original formula to determine the velocity at this point:

$$v = \sqrt{2gh} = \sqrt{2(10\text{ m/s}^2)(2\text{ m})} = 6.3\text{ m/s}$$

**Solutions to the Unsolved Physics Problems** Balungi Francis,2019-04-25 People have always wanted answers to the big questions Where did we come from How did the universe begin What is the meaning and design behind it all Is there anyone out there The creation accounts of the past now seem less relevant and credible They have been replaced by a variety of what can only be called superstitions ranging from New Age to Star Trek But real science can be far stranger than science fiction and much more

satisfying I am a scientist And a scientist with a deep fascination with physics cosmology the universe and the future of humanity I was brought up by my parents to have an unwavering curiosity and like my father to research and try to answer the many questions that science asks us I have spent my life travelling across the universe inside my mind Through theoretical physics I have sought to answer some of the great questions At one point I thought I would see the end of physics as we know it but now I think the wonder of discovery will continue long after I am gone We are close to some of these answers but we are not there yet The problem is most people believe that real science is too difficult and complicated for them to understand But I don t think this is the case To do research on the fundamental laws that govern the universe would require a commitment of time that most people don t have the world would soon grind to a halt if we all tried to do theoretical physics But most people can understand and appreciate the basic ideas if they are presented in a clear way with equations which I believe is possible and which is something I have enjoyed trying to do throughout my life I want to add my voice to those who demand why we must ask the big questions immediate action on the key challenges for our global community I hope that going forward even when I am no longer here people with power can show creativity courage and leadership Let them rise to the challenges and act now
