

The Ramp (and Friction) PhET Simulation Lab

Introduction:

When an object is dragged across a horizontal surface, the force of friction that must be overcome depends on the normal force as $F_f = \mu F_n$ and the normal

force is given by $F_n = F_g$. When the surface becomes an inclined plane, the normal force changes and when the normal force changes, so does the friction. In this lab, you will change the angle of an inclined plane and observe how weight is resolved into its components (F_n and F_g) using the basic trig functions.

The Ramp

Procedure: *Play with the Sims → Physics → Motion → The Ramp* Run Now!

- Be sure to stay in the Introduction part of the simulation. *More features* will be used later when we investigate energy. Start by playing with the cabinet some. Have fun, really... Now...back to work.
 - Move the cabinet up and down the ramp by dragging it with your mouse.
 - Move the ramp to an angle of zero (horizontal) and draw a free body diagram of the cabinet here:
1. On a horizontal plane, the normal force is perpendicular to the weight.
 2. The cabinet has a mass of 100kg. It therefore has a normal force of 980 N and a friction force (on the horizontal plane) of 294 N $\mu = 0.30$
- Reset the ramp and draw a free body diagram of the cabinet in the box here:
3. The force down the plane and normal force are components of weight.
 4. Before we add an applied force on the ramp, there is a force of friction that acts against the force down the plane(Force parallel).
 5. When we apply a force to get the cabinet moving, the friction force acts in the opposite direction as movement of the cabinet.
 6. Slowly increase angle (0.1 degrees at a time) of the ramp until the cabinet starts to move on its own. What angle is this? 16.8 ° = θ
