SOLAR POWER TECHNOLOGY IN ACTION!

In one way or another, almost every form of energy we use originates from the sun. Solar energy directly powers photovoltaic cells and thermal collectors. Indirectly, we get power from plants grown by the sun, streams heated by the sun, and Earth's weather systems sustained by the sun. Even the energy stored in fossil fuels originated as energy from the sun, captured by plants and animals millions of years ago. Physics Solar Workshop explores the topic of solar energy, focusing on photovoltaic

cells. By building 11 models and conducting 30 experiments, you will learn how solar cells transform light into electrical energy, and how motors and mechanical devices can optimize the work done by this energy. You will build different types of vehicles and machines to demonstrate how gears can convert and transform power for different needs. The 64-page, full-color manual provides instructions for the projects and experiments.

This book presents a global and synthetic vision of planetology the study of objects in the Solar System In the past several decades planetology has undergone a real revolution marked in particular by the discovery of the Kuiper belt beyond Neptune the discovery of extrasolar planets and also by the space exploration of ever more distant objects Today it is at the crossroads of many disciplines astronomy geophysics geochemistry and biology The Solar System 2 studies the outer Solar System satellites and rings of giant planets small bodies and dwarf planets It also deals with meteorites and cosmochemistry as well as the formation and dynamics of the Solar System It addresses the question of the origin of life and extraterrestrial life and presents all of the methods in the study of planetology **Scientific and Technical Aerospace Reports**, 1995

Concentrator Photovoltaics CPV is one of the most promising technologies to produce solar electricity at competitive prices High performing CPV systems with efficiencies well over 30% and multi megawatt CPV plants are now a reality As a result of these achievements the global CPV market is expected to grow dramatically over the next few years reaching cumulative installed capacity of 12.5 GW by 2020 In this context both new and consolidated players are moving fast to gain a strategic advantage in this emerging market Written with clear brief and self contained technical explanations Handbook of Concentrator Photovoltaic Technology provides a complete overview of CPV covering the fundamentals of solar radiation solar cells concentrator optics modules and trackers all aspects of characterization and reliability case studies based on the description of actual systems and plants in the field environmental impact market potential and cost analysis CPV technology is at a key point of expansion This timely handbook aims to provide a comprehensive assessment of all CPV scientific technological and engineering background with a view to equipping engineers and industry professionals with all of the vital information they need to help them sustain the impetus of this encouraging technology Key features Uniquely combines an explanation of the fundamentals of CPV systems and components with an overview of the market place and their real life applications Each chapter is written by well known industry specialists with extensive expertise in each particular field of CPV technology Reviews the basic concepts of multi junction solar cells and new concepts for CPV cells highlighting the key differences between them Demonstrates the state of the art of several CPV centres and companies Facilitates future cost calculation models for CPV Features extensive case studies in each chapter including coverage of CPV modules and systems
