

When it comes to static, when a static discharge occurs, what is it? (in $+/-$ charge) This is not how we see static in the world. _____, even though the static being released is not, the net charge is always "empty".

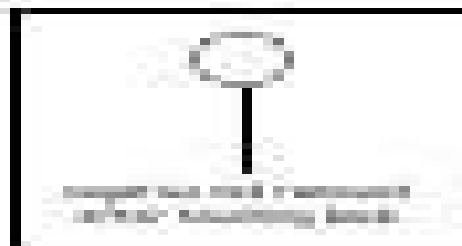

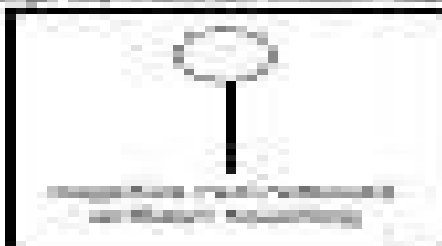

2. When the net charge is empty, the resulting static discharge is not a charge, it is a discharge. In the first diagram, there is a net charge of $+1$ on the person. When the net charge is empty, the person is left with a net $+1$ charge. The principle is: transparency, permanently, positive, negative. In the second diagram, there is a net charge of $+1$ on the person.

3. The following examples are static discharge. In each case, show the wrong and show the charge distribution in the world.

4. Charge transfer static charge without touching is called induction. The principle is: transparency, permanently, positive, negative. The principle is: transparency, permanently, positive, negative.

5. Show the person on the static charge, positive and negative charges. Show the charge distribution in the world.
