 A. Iaizzo,2010-03-11 A revolution began in my professional career and education in 1997 In that year I visited the University
 of Minnesota to discuss collaborative opportunities in cardiac anatomy physiology and medical device testing The meeting
 was with a faculty member of the Department of Anesthesiology Professor Paul Iaizzo I didn t know what to expect but as
 always I remained open minded and optimistic Little did I know that my life would never be the same During the mid to late
 1990s Paul Iaizzo and his team were performing anesthesia research on isolated guinea pig hearts We found the work
 appealing but it was unclear how this research might apply to our interest in tools to aid in the design of implantable devices
 for the cardiovascular system As discussions progressed we noted that we would be far more interested in reanimation of
 large mammalian hearts in particular human hearts Paul was confident this could be accomplished on large hearts but
 thought that it would be unlikely that we would ever have access to human hearts for this application We shook hands and
 the collaboration was born in 1997 In the same year Paul and the research team at the University of Minnesota including Bill
 Gallagher and Charles Soule reanimated several swine hearts Unlike the previous work on guinea pig hearts which were
 reanimated in Langendorff mode the intention of this research was to produce a fully functional working heart model for
