- **Stepper Motors:**
 - For applications where precise measuring of a motors' rotor position is critical, a stepper motor is the best choice. Stepper motors operate differently from other motors; rather than voltage being applied and the rotor spinning smoothly, stepper motors turn on a series of electrical pulses to the motor's windings. Each pulse rotates the rotor by a discrete amount or "step", hence the name "stepper motor".
 - We will use a PIC microcontroller to activate drive transistors in the right order to rotate the stepper motor.
