Everyday Matters in Science and Mathematics Ricardo

Nemirovsky, Ann S. Rosebery, Jesse Solomon, Beth Warren, 2004-12-13 This book re examines the dichotomy between the everyday and the disciplinary in mathematics and science education and explores alternatives to this opposition from points of view grounded in the close examination of complex classroom events It makes the case that students everyday experience and knowledge in their entire manifold forms matter crucially in learning sciences and mathematics The contributions of 13 research teams are organized around three themes 1 the experiences of students in encounters with everyday matters of a discipline 2 the concerns of curriculum designers including teachers as they design activities intended to focus on everyday matters of a discipline and 3 the actions of teachers as they create classroom encounters with everyday matters of a discipline As a whole the volume reflects the shift in the field of educational research in recent years away from formal structural models of learning toward emphasizing its situated nature and the sociocultural bases of teaching and learning At least two trends increasing awareness that formal theories can be useful guides but are always partial and provisional in how they disclose classroom experiences and the widespread availability of video and audio equipment that enables effortless recording of classroom interactions have reoriented the field by allowing researchers and teachers to look at learning starting with complex classroom events rather than formal theories of learning Such examinations are not meant to replace the work on general theoretical frameworks but to ground them in actual complex events This reorientation means that

researchers and teachers can now encounter the complexity of learning and teaching as lived human meaning making experiences Immersion in this complexity compels rethinking assumptions about the dichotomies that have traditionally organized the field s thinking about learning Further it has important implications for how the relationship between theory and practice in understanding teaching and learning is viewed Everyday Matters in Science and Mathematics Studies of Complex Classroom Events is an important resource for researchers teacher educators and graduate students in mathematics and science education and a strong supplemental text for courses in these areas and also in cognition and instruction and instructional design **American Book Publishing Record** ,2004 *Statistical Image Processing and Multidimensional Modeling* Paul Fieguth,2010-10-17 Images are all around us The proliferation of low cost high quality imaging devices has led to an explosion in acquired images When these images are acquired from a microscope telescope satellite or medical imaging device there is a statistical image processing task the inference of something an artery a road a DNA marker an oil spill from imagery possibly noisy blurry or incomplete A great many textbooks have been written on image processing However this book does not so much focus on images per se but rather on spatial data sets with one or more measurements taken over a two or higher dimensional space and to which standard image processing algorithms may not apply There are many important data analysis methods developed in this text for such statistical image problems Examples abound throughout remote sensing satellite data mapping data assimilation climate change studies land use medical imaging organ segmentation anomaly detection computer vision image classification segmentation and other 2D 3D problems biological imaging porous media The goal then of this text is to address methods for solving multidimensional statistical problems The text strikes a balance between mathematics and theory on the one hand versus applications and algorithms on the other by deliberately developing the basic theory Part I the mathematical modeling Part II and the algorithmic and numerical methods Part III of solving a given problem The particular emphases of the book include inverse problems multidimensional modeling random fields and hierarchical methods
