Manual of Antisense Methodology Gunther Hartmann, Stefan Endres, 2012-12-06 In the past few years antisense methodology has moved from in vitro studies to in vivo studies and first human trials While the basic concept of antisense technology is simple the methodological problems associated with its use are numerous and complex Antisense based methods have proven to be a field of research where careful attention to experimental protocols and appropriate controls is necessary The Manual of Antisense Methodology emphasizes the application of antisense oligonucleotides and is a guide for the identification of antisense and non antisense effects in different experimental settings The work is organized into three sections antisense application in vitro antisense application in vivo animal models and finally clinical antisense studies Where at all possible the methods are described in sufficient detail to allow reproduction of a given experiment The Manual of Antisense Methodology will be of interest to researchers in immunology cancer research pharmacology and internal medicine and physicians conducting clinical studies in these fields

Manual of Embryo Selection in Human Assisted Reproduction Catherine Racowsky, Jacques Cohen, Nicholas Macklon, 2023-01-26 Selecting the best embryo to transfer to the uterus is key to successful in vitro fertilization IVF A huge amount of research has been devoted to this topic and there are numerous methods used from simple morphological assessment to molecular biological techniques to assess the genome and metabolism of the newly fertilized embryo For many of these techniques an adequate evidence base is lacking and expert opinion is valuable Clinical imperatives require ranking all embryos in a cohort according to their viability thereby enabling the selection of the best embryo to optimize live birth outcome a key indicator used to measure and rate IVF Clinics worldwide This clear and informative manual will provide embryologists and clinicians with an overview of the tools now available to assist in embryo selection as well as evidence for their efficacy and safety and the broader considerations that must underlie these important clinical decisions

Micromanipulation in Assisted Conception Steven D. Fleming, Robert S. King, 2003-11-06 This guide to micromanipulation techniques for assisted conception in a clinical setting includes detailed descriptions of all common micromanipulation systems currently in use in IVF laboratories In explaining how to optimize their successful use the volume covers state of the art techniques including ICSI and procedures such as assisted hatching and the blastomere biopsy for PGD Valuable information on troubleshooting mechanical and technical difficulties is provided to help professionals ranging from technicians to consultant obstetricians master the techniques

Manual of Intracytoplasmic Sperm Injection in Human Assisted Reproduction Gianpiero D. Palermo, Zsolt Peter Nagy, 2021-11-25 Not everything in medical science has a clear beginning The first realization of infertility and putative remedies remain shrouded in contextual history but likely goes back to the dawn of our species well before there was a

The AGT Cytogenetics

Laboratory Manual Marilyn S. Arsham, Margaret J. Barch, Helen J. Lawce, 2017-04-24 Cytogenetics is the study of chromosome morphology structure pathology function and behavior The field has evolved to embrace molecular cytogenetic changes now termed cytogenomics Cytogeneticists utilize an assortment of procedures to investigate the full complement of chromosomes and or a targeted region within a specific chromosome in metaphase or interphase Tools include routine analysis of G banded chromosomes specialized stains that address specific chromosomal structures and molecular probes such as fluorescence in situ hybridization FISH and chromosome microarray analysis which employ a variety of methods to highlight a region as small as a single specific genetic sequence under investigation The AGT Cytogenetics Laboratory Manual Fourth Edition offers a comprehensive description of the diagnostic tests offered by the clinical laboratory and explains the science behind them One of the most valuable assets is its rich compilation of laboratory tested protocols currently being used in leading laboratories along with practical advice for nearly every area of interest to cytogeneticists In addition to covering essential topics that have been the backbone of cytogenetics for over 60 years such as the basic components of a cell use of a microscope human tissue processing for cytogenetic analysis prenatal constitutional and neoplastic laboratory safety and the mechanisms behind chromosome rearrangement and aneuploidy this edition introduces new and expanded chapters by experts in the field Some of these new topics include a unique collection of chromosome heteromorphisms clinical examples of genomic imprinting an example driven overview of chromosomal microarray mathematics specifically geared for the cytogeneticist usage of ISCN s cytogenetic language to describe chromosome changes tips for laboratory management examples of laboratory information systems a collection of internet and library resources and a special chapter on animal chromosomes for the research and zoo cytogeneticist The range of topics is thus broad yet comprehensive offering the student a resource that teaches the procedures performed in the cytogenetics laboratory environment and the laboratory professional with a peer reviewed reference that explores the basis of each of these procedures This makes it a useful resource for researchers clinicians and lab professionals as well as students in a university or medical school setting

Mitosis and Meiosis

, 1998-12-16 Mitosis and Meiosis details the wide variety of methods currently used to study how cells divide as yeast and insect spermatocytes higher plants and sea urchin zygotes With chapters covering micromanipulation of chromosomes and making expressing and imaging GFP fusion proteins this volume contains state of the art how to secrets that allow researchers to obtain novel information on the biology of centrosomes and kinetochores and how these organelles interact to form the spindle Chapters Contain Information On How to generate screen and study mutants of mitosis in yeast fungi and flies Techniques to best image fluorescent and nonfluorescent tagged dividing cells The use and action of mitoclastic drugs How to generate antibodies to mitotic

components and inject them into cells Methods that can also be used to obtain information on cellular processes in nondividing cells **Tissue Engineering Methods and Protocols** Jeffrey R. Morgan, Martin L. Yarmush, 1998-09-28 In recent years the field of tissue engineering has begun in part to coalesce around the important clinical goal of developing substitutes or replacements for defective tissues or organs These efforts are focused on many tissues including skin cartilage liver pancreas bone blood muscle the vasculature and nerves There is a staggering medical need for new and effective treatments for acquired as well as inherited defects of organs tissues Tissue engineering is at the interface of the life sciences engineering and clinical medicine and so draws upon advances in cell and molecular biology materials sciences and surgery as well as chemical and mechanical engineering Such an interdisciplinary field requires a broad knowledge base as well as the use of a wide assortment of methods and approaches It is hoped that by bringing together these protocols this book will help to form connections between the different disciplines and further stimulate the synergism underlying the foundation of the tissue engineering field **Microinjection and Transgenesis** Angel Cid-Arregui, Alejandro Garcia-Carranca, 2012-12-06 The establishment of microinjection protocols about 20 years ago for cultured cells and shortly thereafter for the generation of transgenic mice by microinjection of DNA into fertilized mouse eggs greatly influenced many fields of biology Not only have the data generated using these approaches contributed to a large extent to our present understanding of gene regulation and cellular function of higher eukaryotic cells but current knowledge and future developments in this area will certainly have a great impact on basic and applied research for many years to come This laboratory manual describes the current state of the art in this research area and focuses primarily on both the experimental strategies with an extensive bibliography and the detailed procedures A large number of studies are presently being performed and a great variety of new experimental designs are rapidly being developed The book contains protocols on injection of somatic cells as well as on injection of embryos the use of similar equipment being a common feature In the articles dedicated to somatic cells full descriptions of the manual and automatic injection systems are given as well as the methods for the analysis of injected cells by video microscopy electron microscopy or in situ hybridizations In addition comprehensive protocols are given for injection experiments with very different purposes such as to study signal transduction or microtubule dynamics

Three-dimensional and Multidimensional Microscopy, 2005 **Fibrinogen 3** Michael W. Mosesson, 1988 **In Vitro Fertilization and Embryo Transfer** Don P. Wolf, 2012-12-06 The use of human in vitro fertilization in the management of infertility is the outgrowth of years of laboratory observations on in vitro sperm egg interaction The editors of this work have themselves contributed significantly to basic knowledge of the mammalian fertilization process The observations of Don Wolf on sperm penetration the block to polyspermy and most recently sperm hyperactivation in the monkey and human Gregory Kopf's elucidation of the mechanisms of sperm activation during penetration and the reciprocal dialogue between sperm and egg and Barry Bavister's definition of culture conditions and requirements necessary for in vitro

oocyte maturation fertilization and development in model mammalian systems including nonhuman primates have contributed greatly to our understanding of the mammalian fertilization process Wolf Kopf and Gerrity have enjoyed substantial interaction with clinicians in Departments of Obstetrics and Gynecology and have been directly involved with successful IVF programs Both Wolf and Kopf have served as research scientists in the Division of Reproductive Biology at the University of Pennsylvania which for more than 22 years has fostered co mingling of clinically oriented and basic science faculty It is through such interaction which clearly exists at many institutions including the University of Wisconsin that the process of technology transfer is best served Without an exquisitely coordinated laboratory there can be no consistent success in human in vitro fertilization Quality control is pivotal but close collaboration between the laboratory and the clinic is also essential as information is shared and correlated
