General principles when taking measurements

- Write down the number of DP that is given by your measuring devices. For example, do not write "11 cm", write "11.0" cm when using a ruler.
- Write all subsequent measurements with the same number of DP
- The exception to this is when using a stopwatch – 1 dp at best due to human reaction time
- If you are using a digital meter with a varying value – be sensible.
 - If the meter changes between two values (e.g. 5.39 V and 5.40 V), use the higher.
 - If it changes between three values, choose the middle.
 - Remember, though, that the examiners will not be able to check!

Q1. This is an experiment that should run fairly simply. Begin by setting up the apparatus and taking and recording a measurement.

- a) Taking a measurement of a dependent variable – you will usually be told that it should be set to roughly a specific value.
Marks will not be awarded if your measurement is not very close to this!!
If it tells you "roughly 25.0 cm" – then I guess 25.2 cm is ok. But **just do 25.0 cm** or as close as you can.
- b) Taking a measurement of an independent variable
- Use an appropriate number of SF/DP – this step will often be a distance, so use the DP available on your measuring device. For time, 1 DP is appropriate
 - Evidence of repeats – take repeat values and find an average. Show your calculations as evidence or not credit will be given
 - If you are finding a time period of an oscillation, you can take multiple (n) oscillations, and divide your total time by n .
- c) Table: general marks criteria
- 4 marks for taking six readings with a correct trend
 - 1 mark for using a wide enough range (often this range will be given in the question). Usually at least 60% of the total range that you could measure
 - 1 mark for correct column headings **with correct units for all!**
 - 1 mark for being consistent with your DP of your independent variable – for each column use the same number of DP

Loxton,P. Pope,2012-12-06 This book contains a selection of papers and articles in instrumentation previously published in technical periodicals and journals of learned societies Our selection has been made to illustrate aspects of current practice and applications of instrumentation The book does not attempt to be encyclopaedic in its coverage of the subject but to provide some examples of general transduction techniques of the sensing of particular measurands of components of instrumentation

systems and of instrumentation practice in two very different environments the food industry and the nuclear power industry We have made the selection particularly to provide papers appropriate to the study of the Open University course T292 Instrumentation The papers have been chosen so that the book covers a wide spectrum of instrumentation techniques Because of this the book should be of value not only to students of instrumentation but also to practising engineers and scientists wishing to glean ideas from areas of instrumentation outside their own fields of expertise In recent years instrumentation has emerged as a discipline in its own right rather than as an adjunct to traditional science and engineering disciplines This development has been driven partly by the needs of industries for new and improved sensing techniques and partly by new technological developments such as microprocessors optical fibres and integrated silicon sensors which are revolutionising sensing and signal processing practice
