McDonough,1999-10-22 The ensemble of manuscripts presented in this special volume captures the stimulating cross disciplinary dialogue from the International Symposium on Deep Structure Composition and Evolution of Continents Harvard University Cambridge Massachusetts 15 17 October 1997 It will provide an update on recent research developments and serve as a starting point for research of the many outstanding issues After its formation at mid oceanic spreading centers oceanic lithosphere cools thickens and subsides until it subducts into the deep mantle beneath convergent margins As a result of this continuous recycling process oceanic lithosphere is typically less than 200 million years old the global average is about 80 Myr A comprehensive multi disciplinary study of continents involves a wide range of length scales tiny rock samples and diamond inclusions may yield isotope and trace element signatures diagnostic for the formation age and evolution of parts of cratons while geophysical techniques e g seismic and electromagnetic imaging constrain variations of elastic and conductive properties over length scales ranging from several to many thousand kilometers Integrating and reconciling this information is far from trivial and as several papers in this volume document the relationships between for instance formation age and tectonic behavior on the one hand and the seismic signature heat flow and petrology on the other may not be uniform but may vary both within as well as between cratons These observations complicate attempts to determine the variations of one particular observable e g heat flow lithosphere thickness as a function of another e g crustal age on the basis of global data compilations and tectonic regionalizations Important conclusions of the work presented here are that 1 continental deformation for instance shortening is not restricted to the crust but also involves the lithospheric mantle 2 the high wavespeed part of continental lithospheric mantle is probably thinner than inferred previously from

vertically travelling body waves or from global surface wave models and 3 the seismic signature of ancient continents is more complex than expected from a uniform relationship with crustal age      *Troubleshooting Campus Networks* Priscilla Oppenheimer, Joseph Bardwell, 2002-10-10 Ein praktischer Ratgeber zur Fehlersuche in Campus LANs Jeder Netzwerkdesigner und administrator erwartet dass sein Campus LAN effektiv arbeitet Doch da die meisten Netzwerke mit Cisco Routern laufen müssen sie mit vielen anderen Netzwerkprotokollen interoperieren was zu Problemen führen kann *Troubleshooting Campus Networks* gibt praktische Anleitungen wie man Protokollanalysen und andere Tools verwendet um Probleme sowohl für Cisco als auch für Traffic Patterns verschiedener Protokolle zu erkennen Behandelt werden sowohl Legacy Systeme als auch neueste Technologien wie z B gigabit Ethernet und 802.11 wireless      *Physics Briefs*, 1990
