Neuroergonomics Chang S. Nam,2020-02-27 This book sums up key research findings and theoretical and technological advances having a direct bearing on neuroergonomics Neuroergonomics is an emerging area whose Neuroergonomics is an emerging area that is collectively defined as the study of human brain function and behaviour in relation to behavioural performance in natural environments and everyday settings It helps readers to understand neural mechanisms of human cognition in the context of human interaction with complex systems as well as understanding the change of perception

decision making and training in humans The authors give new insights into augmenting human performance reflecting upon the opportunities provided through neuroergonomics research and development Computer systems acting on data from behavioural output physiological and neurological sensing technologies are used to determine the user's cognitive state and adapt the systems to change support and monitor human cognition Various domains and case studies delve into the field of neuroergonomics in detail These include but are not limited to an evaluation of technologies in health workplace and education settings to show the different impacts of neuroergonomics in everyday lives assessment of real time cognitive measures dynamic casual interactions between inhibition and updating functions through analysis of behavioral neurophysiological and effective connectivity metrics and applications in human performance modelling and assessment of mental workload showing the reader how to train and improve working memory capacity Neuroergonomics Principles and Practice provides academic practitioners and graduate students with a single go to handbook that will be of significant assistance in research associated with human factors and ergonomics human computer interaction human systems engineering and cognitive neuroscience

*Current Problems in Applied Mathematics and Computer Science and Systems* Anatoly Alikhanov,Pavel Lyakhov,Irina Samoylenko,2023-06-05 This book is based on the best papers accepted for presentation during the International Conference on Actual Problems of Applied Mathematics and Computer Systems APAMCS 2022 Russia The book includes research materials on modern mathematical problems solutions in the field of scientific computing data analysis and modular computing The scope of numerical methods in scientific computing presents original research including mathematical models and software implementations related to the following topics numerical methods in scientific computing solving optimization problems methods for approximating functions etc The studies in data analysis and modular computing include contributions in the field of deep learning neural networks mathematical statistics machine learning methods residue number system and artificial intelligence Finally the book gives insights into the fundamental problems in mathematics education The book intends for readership specializing in the field of scientific computing parallel computing computer technology machine learning information security and mathematical education
