NEWTONS LAWS

State the following laws

1. Newtons second law of motion
2. Newtons law of universal gravitation

QUESTION 2

A block of mass 1 kg is connected to another block of mass 4 kg by a light inextensible string. The at 30° to the horizontal, by means of a constant 40 N force parallel to the plane as shown in the diagram below.

The magnitude of the kinetic frictional force between the surface and the 4 kg block is 10 N.

The coefficient of kinetic friction between the 1 kg block and the surface is 0.29.

2.1 State Newton's third law of motion in words. (2)

2.2 Draw a labelled free-body diagram showing ALL the forces acting on the **1 kg** block as it moves up the incline. (5)

2.3 Calculate the magnitude of the:

2.3.1 Kinetic frictional force between the 1 kg block and the surface (3)

2.3.2 Tension in the string connecting the two blocks (6)

QUESTION 15

Block **P**, of mass 2 kg, is connected to block **Q** of mass 3 kg, by a light inextensible string. Both blocks are on a plane inclined at an angle of 30° to the horizontal. Block **Q** is pulled by a constant force of 40 N at an angle of 25° to the incline.

Block **P** moves on a rough section, **AB**, of the incline, while block **Q** moves on a frictionless section, **BC**, of the incline.
See diagram.

An average constant frictional force of 2.5 N acts on block **P** as it moves from **A** to **B** up the incline.

15.1 State Newton's Second Law in words. (2)

15.2 Draw a labelled free-body diagram for block **P** (4)

15.3 Calculate the magnitude of the acceleration of block **P** while block **P** is moving on section **AB**. (6)

15.4 If block **P** has now passed point **B**, how will its acceleration compare to that calculated in QUESTION 15.3? Choose from GREATER THAN, SMALLER THAN or EQUAL TO. Give a reason for the answer. (2)

systems of partial differential equations A planned second volume will be devoted to kinetic models First and foremost this book mathematically derives certain common fluid models from more general models Although some of these derivations may be well known to physicists it is important to highlight the assumptions underlying the derivations and to realize that some seemingly simple approximations turn out to be more complicated than they look Such approximations are justified using asymptotic analysis wherever possible Furthermore efficient simulations of multi dimensional models require precise statements of the related systems of partial differential equations along with appropriate boundary conditions Some mathematical properties of these systems are presented which offer hints to those using numerical methods although numerics is not the primary focus of the book भौतिक विज्ञान *(Bhautik Vigyan - Physics) Class 11* Dr. J. Colored Discrete Spaces Luca Lionni,2018-08-01 This book provides a number of combinatorial tools that allow a systematic study of very general discrete spaces involved in the context of discrete quantum gravity In any dimension D we can discretize Euclidean gravity in the absence of matter over random discrete spaces obtained by gluing families of polytopes together in all possible ways These spaces are then classified according to their curvature In D 2 it results in a theory of random discrete spheres which converge in the continuum limit towards the Brownian sphere a random fractal space interpreted as a quantum random space time In this limit the continuous Liouville theory of D 2 quantum gravity is recovered Previous results in higher dimension regarded triangulations converging towards a continuum random tree or gluings of simple building blocks of small sizes for which multi trace matrix model results are recovered in any even dimension In this book the author develops a bijection with stacked two dimensional discrete surfaces for the most general colored building blocks and details how it can be used to classify colored discrete spaces according to their curvature The way in which this combinatorial problem arrises in discrete quantum gravity and random tensor models is discussed in detail
