National Bureau of Standards,1983 Interventions for Persisting Ductus Arteriosus in the Preterm Infant Michael Obladen,Petra Koehne,2005 Over the past few years a remarkably rapid evolution in the professional level of neonatology and in the survival of immature infants has been witnessed Persisting ductus arteriosus is common in this population and is associated with impaired longterm outcome Many uncertainties exist concerning indication approach best time and side effects of necessary measurements and interventions to avoid later neurodevelopmental handicaps of the survivors Experts in neonatology and pediatric cardiology give their opinion in this book We are sure it will help to define the level of evidence and to develop standards of intervention for persisting ductus arteriosus in Europe Adequate dealing with the ductus will become a challenge for every perinatal center *Nuclear Science Abstracts* ,1976 **Paper** ,1977 *Smooth Quasigroups and Loops* L. Sabinin,2012-12-06 During the last twenty five years quite remarkable relations between nonas sociative algebra and differential geometry have been discovered in our work Such exotic structures of algebra as quasigroups and loops were obtained from purely geometric structures such as affinely connected spaces The notion of module was introduced as a fundamental algebraic invariant of differential geometry For any space with an affine connection loopuscular module and geodular structures partial smooth algebras of a special kind were introduced and studied As it happened the natural geodular structure of an affinely connected space allows us to reconstruct this space in a unique way Moreover any smooth abstractly given geodular structure generates in a unique manner an affinely connected space with the natural geodular structure isomorphic to the initial one The above said means that any affinely connected in particular Riemannian space can be treated as a purely algebraic structure equipped with smoothness Numerous habitual geometric properties may be expressed in the language of geodular structures by means of algebraic identities etc Our treatment has led us to the purely algebraic concept of affinely connected in particular Riemannian spaces for example one can consider a discrete or even finite space with affine connection in the form of geodular structure which can be used in the old problem of discrete space time in relativity essential for the quantum space time theory **Publications of the National Bureau of Standards** United States.
