

Moments - moment of a force is the turning effect of a force on an object

Using a lever (eg spanner) exerts a greater force on the load than the force exerted on the lever (force multiplier)

Conserving momentum - in closed systems, the total momentum before a collision is equal to the total momentum after the collision (provided no external factors)

$$(mass\ of\ A \times velocity\ of\ A) + (mass\ of\ B \times velocity\ of\ B)$$

Dependent on mass, velocity change and impact time

Longer impact time = reduced impact force

Feature	Reason
Seat belt	Spreads out force and increases impact time reducing force
Helmetts	Increase impact time reducing force
Air bags	Spreads out force and increases impact time reducing force
Crumple zones	Increase impact time reducing force
Child car seats	Spreads out the force. Rear facing protects boy against impact
Side impact bars	Increase impact time reducing force
Collapsing steering wheel	Increase impact time reducing force

Heidelberg September 1985 The Editors Contents Introduction Photonuclear Data Index United States. National Bureau of Standards,1967 Nuclear Tests Charles S. Shapiro,Valerie I. Kiselev,Eugene V. Zaitsev,2013-04-17 This volume focuses

on the human exposures and medical effects studies in the Semipalatinsk Altai region of Siberia that were a consequence of the radioactive fallout from nuclear test explosions that took place at the Semipalatinsk Test Site of the former Soviet Union. It contains a detailed account of a NATO Advanced Research Workshop (ARW) devoted to the subject and a selection of the papers presented. The title of the ARW was Long term Consequences of Nuclear Tests for the Environment and Population Health Semipalatinsk Altai Case Studies. The estimated exposures to large numbers of people in the Altai lie in an important dose rate and dose domain. Hence the research reported herein provides new and unique information on the effects of radiation on humans. Also emphasized at the ARW were studies involving fallout from the Pacific Island tests of the U.S.A. There have been over 2300 nuclear weapon test explosions to date. More than 500 took place in the atmosphere and outer space; the remainder were underground. The atmospheric tests comprise the largest source of anthropogenic radioactivity released into the earth's atmosphere to date. The vast majority in number and yield were carried out by the former Soviet Union (FSU) and the United States. Each superpower maintained two primary test sites: one continental, primarily for small yield tests, and the other more remote for larger yield tests. Photonuclear Data Group, 1965 **Turbulence—an Odyssey** Michael Eckert, 2022-02-01 Turbulence is a research field where high expectations have met with recurrent frustration. It is a common perception among physicists, mathematicians, and engineers that there is a big mystery behind the phenomenon of turbulence. Its history has also remained anything but well researched. Unlike topics such as quantum theory which began to attract physics historians as long as fifty years ago, turbulence has until now received only little professional historical investigation. In this book which complements his earlier Springer Brief *The Turbulence Problem*, the author sketches the history of turbulence from the vantage point of its roots. Part I: the basic concepts; Part II: and the formation of a scientific community that regarded turbulence as a research field in its own right; Part III: From this perspective, turbulence research appears to undertake an odyssey through uncharted territories. The book follows this development up until a conference in Marseille in the year 1961 which marked the inauguration of turbulence in the words of its organizer as a new science. The epilogue contains some observations about turbulence research since 1961. This book provides a rich source of information for all those interested in the history of this major field of basic and applied science.
