Problem 4B**NEWTON'S SECOND LAW****PROBLEM**

A 1.5 kg ball has an acceleration of 9.0 m/s^2 to the left. What is the net force acting on the ball?

SOLUTION

Given: $m = 1.5 \text{ kg}$
 $a = 9.0 \text{ m/s}^2$ to the left

Unknown: $F = ?$

Use Newton's second law, and solve for F .

$$F = ma$$

Because there is only one force,

$$F = F$$

$$F = (1.5 \text{ kg})(9.0 \text{ m/s}^2) = 14 \text{ N}$$

$$F = \boxed{14 \text{ N to the left}}$$

ADDITIONAL PRACTICE

- David Parley, a racing driver, survived deceleration from 173 km/h to 0 km/h over a distance of 0.560 m when his car crashed. Assume that Parley's mass is 78.0 kg . What is the average force acting on him during the crash? Compare this force to Parley's weight. (Hint: Calculate the average acceleration first.)
- A giant crane in Washington, D.C., was tested by lifting a $2.000 \times 10^6 \text{ kg}$ load.
 - Find the magnitude of the force needed to lift the load with a net acceleration of 0 m/s^2 .
 - If the same force is applied to pull the load up a smooth slope that makes a 30.0° angle with the horizontal, what would be the acceleration?
- When the click beetle jumps in the air, its acceleration upward can be as large as 400.0 times the acceleration due to gravity. (An acceleration this large would instantly kill any human being.) For a beetle whose mass is 40.00 mg , calculate the magnitude of the force exerted by the beetle on the ground at the beginning of the jump with gravity taken into account. Calculate the magnitude of the force with gravity neglected. Use 9.807 m/s^2 as the value for free-fall acceleration.

personally to the author make this book fascinating for non physicists too The book consists of three parts on I major problems of physics and astrophysics II the philosophy and history of science and III memorial essays on famous physicists The author is an internationally renowned scientist who summarizes here his life long interests experience and insights into the work of other eminent 20th century physicists Professor Ginzburg s fundamental contributions to the theory of superconductivity encapsulated in the famous and widely used Ginzburg Landau equations have been recognized with the 2003 Nobel Prize in Physics shared with A A Abrikosov and A E Leggett

Reviving Ancient Chinese Mathematics Jiri Hudecek, 2014-07-25 Twentieth century China has been caught between a desire to increase its wealth and power in line with other advanced nations which by implication means copying their institutions practices and values whilst simultaneously seeking to preserve China s independence and historically formed identity Over time Chinese philosophers writers artists and politicians have all sought to reconcile these goals and this book shows how this search for a Chinese way penetrated even the most central least contested area of modernity science Reviving Ancient Chinese Mathematics is a study of the life of one of modern China s most admired scientific figures the mathematician Wu Wen Tsun Negotiating the conflict between progress and tradition he found a path that not only ensured his political and personal survival but which also brought him renown as a mathematician of international status who claimed that he stood outside the dominant western tradition of mathematics Wu Wen Tsun s story highlights crucial developments and contradictions in twentieth century China the significance of which extends far beyond the field of mathematics On one hand lies the appeal of radical scientific modernity mechanisation in all its forms and competitiveness within the international scientific community On the other is an anxiety to preserve national traditions and make them part of the modernisation project Moreover Wu s intellectual development also reflects the complex relationship between science and Maoist ideology because his turn to history was powered by his internalisation of certain aspects of Maoist ideology including its utilitarian philosophy of science This book traces how Wu managed to combine political success and international scientific eminence a story that has wider implications for a new century of increasing Chinese activity in the sciences As such it will be of great interest to students and scholars of Chinese history the history of science and the history and philosophy of mathematics
