Microcontrollers Julio Sanchez, Maria P. Canton, 2018-10-08 Focusing on the line of high performance microcontrollers offered by Microchip

Microcontrollers High Performance Systems and Programming discusses the practical factors that make the high performance PIC series a better choice than their mid range predecessors for most systems However one consideration in favor of the mid range devices is the abundance of published application circuits and code samples This book fills that gap Possibility of programming high performance microcontrollers in a high level language C language Source code compatibility with PIC16 microcontrollers which facilitates code migration from mid range to PIC18 devices Pin compatibility of some PIC18 devices with their PIC16 predecessors making the reuse of PIC16 controllers in circuits originally designed for mid range hardware possible Designed to be functional and hands on this book provides sample circuits with their corresponding programs It clearly depicts and labels the circuits in a way that is easy to follow and reuse Each circuit includes a parts list of the resources and components required for its fabrication The book matches sample programs to the individual circuits discusses general programming techniques and includes appendices with useful information **Tracking Solar**

Concentrators Zafrullah Jagoo,2013-01-30 Harnessing a multitude of complementary green energy sources is the only plausible way to satisfy the energy demands of a greedy global economy The potential of solar energy being the most abundant in fulfilling part of the energy requirements of mankind is immense and constitutes the focal point of this book A self powered solar tracker that points directly towards the sun by means of an integrated control mechanism with two degrees of rotational freedom was studied and developed The electro mechanical control system is based on a precisely timed microcontroller circuit that first computes the altitude and azimuth of the sun in real time and then drives a pair of stepper motors that steer the solar tracker towards it A locally built fibre glass parabolic dish the surface of which is lined with a reflective vinyl mirror film serves to concentrate solar rays on its surface *Microcontroller Cookbook* Mike
