Digital Wood Design Fabio Bianconi, Marco Filippucci, 2019-02-24. This book explores various digital representation strategies that could change the future of wooden architectures by blending tradition and innovation. Composed of 61 chapters written by 153 authors hailing from 5 continents, 24 countries and 69 research centers, it addresses advanced digital modeling with a particular focus on solutions involving generative models and dynamic value inherent to the relation between knowing how to draw and how to build. Thanks to the potential of computing areas like parametric design and digital manufacturing are opening exciting new avenues for the future of construction. The book's chapters are divided into five sections that connect digital wood design to integrated approaches and generative design to model synthesis and morphological comprehension to lessons learned from nature and material explorations to constructive wisdom and implementation related challenges and to parametric transfigurations and morphological optimizations.

NEHRP Recommended Provisions for Seismic Regulations for New Buildings and Other Structures Eugene Zeller, 2001-06. Chap. 1 sets forth the general requirements for applying the analysis ground motion structural design criteria. Architectural, mechanical, seismically isolated structures, design requirements for foundation, steel structure, concrete structure, composite steel concrete structure, masonry structure, wood structure, non building structures. Illustrated.
