Data:

$f_{cu} = 40 \text{ MPa}$, $f_{ctd} = 30 \text{ MPa}$, $f_{pu} = 1860 \text{ MPa}$

Initial losses = 10%, total losses = 20%

Minimum cover of concrete to c.g of prestressing steel = 150 mm

Figure (1)

Figure (1) shows a simple post-tensioned concrete beam. The beam is rectangular with a breadth of 400 mm. It is required to:

1. Estimate the beam depth and then calculate the minimum prestressing force and eccentricity of the cables.
2. Draw a schematic sketch showing the cable profile with the chosen eccentricity.
3. Check the stresses at the critical sections in both transfer and working stages.
4. Draw the distribution of normal stresses along the beam length for both stages.
5. Calculate the area of the required prestressing steel.

Engineering Education John Heywood, 2005-12-12 A synthesis of nearly 2 000 articles to help make engineers better educators While a significant body of knowledge has evolved in the field of engineering education over the years much of the published information has been restricted to scholarly journals and has not found a broad audience This publication rectifies that situation by reviewing the findings of nearly 2 000 scholarly articles to help engineers become better educators devise more effective curricula and be more effective leaders and advocates in curriculum and research development The author's first objective is to provide an illustrative review of research and development in engineering education since 1960 His second objective is with the examples given to encourage

the practice of classroom assessment and research and his third objective is to promote the idea of curriculum leadership. The publication is divided into four main parts. Part I demonstrates how the underpinnings of education history, philosophy, psychology, sociology, determine the aims and objectives of the curriculum and the curriculum's internal structure which integrates assessment, content, teaching and learning. Part II focuses on the curriculum itself considering such key issues as content organization, trends and change. A chapter on interdisciplinary and integrated study and a chapter on project and problem based models of curriculum are included. Part III examines problem solving, creativity and design. Part IV delves into teaching, assessment and evaluation beginning with a chapter on the lecture, cooperative learning and teamwork. The book ends with a brief insightful forecast of the future of engineering education. Because this is a practical tool and reference for engineers, each chapter is self contained and may be read independently of the others. Unlike other works in engineering education which are generally intended for educational researchers, this publication is written not only for researchers in the field of engineering education but also for all engineers who teach. All readers acquire a host of practical skills and knowledge in the fields of learning, philosophy, sociology and history as they specifically apply to the process of engineering curriculum improvement and evaluation.
