

Steps in solving heredity problems:

Monohybrid crosses

1. Both parents are heterozygous

The allele of brown eyes is inherited as an autosomal dominant allele. If both parents are heterozygous, what is the probability that they can have a child with blue eyes? With brown eyes?

1. Assign a symbol for each allele

A capital letter is used for a dominant allele and a small letter for recessive allele.

Use the symbol *A* for brown eyes and *a* for blue eyes.

allele	genotype	phenotype
A	AA, Aa	Brown eyes
a	aa	Blue eyes

2. Determine the genotype of each parent and indicate a mating

Because both parents are heterozygous, the male genotype is Aa, female genotype is also Aa.

3. Determine all the possible kinds of gametes each parent can produce

Because of gametes are haploid, they can have only one allele instead of the two present in the diploid cell. As the male has both the brown-eyed allele and the blue-eyed allele, then a half of his gametes will contain the brown-eyed allele and the other half will contain the blue-eyed allele. Because the female has the same genotype, her gametes will be the same as his.

To solve genetic problems, a Punnet square is used.

Female gametes		T	t
Male gametes	T		
	t		

4. Determine all the gene combinations that can result when gametes copulate

To determine the possible combinations of alleles that could occur as a result of this mating, simply fill in each of the empty squares with the alleles that can be donated from each parent.

Female gametes		T	t
Male gametes	T	TT	Tt
	t	Tt	tt

Solving Heredity Problems:

Solving Problems in Genetics Richard Kowles, 2013-12-01 The principle objective of this book is to help undergraduate students in the analysis of genetic problems Many students have a great deal of difficulty doing genetic analysis and the book will be useful regardless of which genetics text is being used Most texts provide some kinds of problems and answers few if any however show the students how to actually solve the problem Often the student has no idea how the answer was derived This work emphasizes solutions not just answers The strategy is to provide the student with the essential steps and the reasoning involved in conducting the analysis Throughout the book an attempt is made to present a balanced account of genetics Topics therefore center about Mendelian cytogenetic molecular quantitative and population genetics with a few more specialized areas Whenever possible the student is provided with the appropriate basic statistics necessary to make some of the analyses The book also builds on itself that is analytical methods learned in early parts of the book are subsequently revisited and used for later analyses A deliberate attempt is made to make complex concepts simple and sometimes to point out that apparently simple concepts are sometimes less so on further investigation Any student taking a genetics course will find this book an invaluable aid to achieving a good understanding of genetic principles and practice
