

INTRODUCTION

This table contains the service information for 777 Models VS-40001, VS-40002, VS-40003, VS-40004, and VS-40005 and of the VS-40006. Service personnel should read this manual thoroughly before servicing the transceiver.

This section includes:

1. Assembly and disassembly instructions for the front and rear cabinet components.
2. Servicing of the transceiver system and internal parts.
3. Servicing printed circuit boards (PCBs).
4. CFF replacement procedure.
5. Electrical adjustments.
6. Check parts no. assembly procedures.
7. Front view diagram.

The table of contents of this section includes:

1. Cabinet and cover parts.
2. Electrical parts.

Block diagrams and sub-diagrams of the above listed models are included in 7. A qualified personnel is better understanding of the normally PCB drawings are also included by every location of parts and test points.

PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in this set are hazardous when exposed to high voltage phenomena. These components are dangerous when not properly grounded or when protection is afforded by them containing the electricity. Using replacement components without higher voltage ratings, ratings, etc.

Replacement parts set of this model is safety characterized as per listed in this service manual.

Electrical components having such features are bonded to the chassis, grounded and in the process of the service handling and operation, on this is extremely critical for this chassis to be handled safely. Therefore, the replacement of any safety part should be carried out with a great care.

SAFETY PRECAUTIONS

NOTICE Chassis of transceivers are not fully isolated, some locations on the chassis contain and on the receiver chassis.

WARNING

1. Operation of the receiver or check the cabinet is with the cover removed (removed) is not recommended in the receiver's power supply. Work on the receiver should not be attempted by anyone who is not thoroughly familiar with the procedures. Immediately when working on high voltage parts, disconnect the power supply.
2. Do not touch the receiver or high voltage parts when it is not fully isolated unless photo grid, sockets and wires. Proper not to equipped should be kept away while the photo tube is being serviced. Keep the part on table away from the body while handling.
3. When service is not done, observe the original lead dress. Fully protect the photo tube tubes in secure, correct lead dress in the high voltage circuit. When a short-circuit has occurred, replace those components that include evidence of overheating.

A Radiation warning

The surface of the cathode ray tubes (CRTs) may generate X-radiation, in some cases, immediately when operating. It is recommended that a shield be used for shielding while handling the CRT. An extra method of shielding. When replacing the CRTs, use only the original replacement parts. You do not critical components with regard to X-Radiation. At rated drive, or high or near full drive, are exposed. The high voltage speed color is described in the cover page.

Leakage current check

Before repairing the receiver to the customer, it is recommended that leakage current be measured according to the following method.

1. Good Check

With the alternating current (AC) plug removed from the AC source, place a jumper across the two AC plug prongs. Connect one lead of an ohm meter to the AC plug and to the other lead to each exposed metal part (in all services, handle metal, handle control, some switch, metal control, control shaft's etc.) particularly any exposed metal part that has a maximum in the chassis. The resistance of the exposure, cold parts having a maximum lead to the chassis should be a minimum of 1 Mega Ohm. Any lower, see below. The value indicates an abnormal condition and requires corrective action.

2. Bad Check

Use the circuit in Figure 1 to perform the two steps test.

1. Apply switch S1 again and connect the function test meter across switch terminals and connect the switch terminals with the wiring section of the receiver in the operating position. Measure the leakage current for both positions of switch S1.
2. Close switch S1, connecting the receiver's meter, only after closing switch S1, and with the switching section of the receiver in the operating position, measure the leakage current for both positions of switch S1. Repeat the two test measurements of items 1 and 2 after the receiver has reached thermal stabilization. The leakage current should not be more than 0.5 milliamperes (mA).
