Multiaccess, Mobility and Teletraffic for Wireless Communications: Volume 3 Kin Leung, Branimir Vojcic, 2012-12-06 This volume presents the proceedings of the Fourth Workshop on Multiaccess Mobility and Teletraffic for Wireless Communications held in October 1998 in Washington D C The focus of this workshop is to identify present and discuss the theoretical and implementation issues critical to the design of wireless networks To ensure proper network design and engineering designers of wireless networks need to understand and address issues such as radio propagation

antenna interference management multiaccess mobility teletraffic signalling and networking protocols In fact not only do these issues need to be understood and addressed their interdependence and interactions also deserve to be examined closely Therefore the goal of this workshop is to present papers addressing these issues with the hope of stimulating further collaboration among researchers of various disciplines in wireless communications High speed wireless networks such as wireless ATM and GSM with high speed data services continue to attract much research and development efforts The major challenges on the physical and link layers in these networks include radio design interference management resource allocation and multiaccess protocol Several papers on these issues are presented here As the availability of radio spectrum is limited there is always a desire to maximize the spectral efficiency for example by diligent and perhaps dynamic re use of frequency and cell layout while guaranteeing a certain quality of service QoS A number of papers at this workshop address these topics
