Nervous System Study Guide

Introduction:

The nervous system is the master coordinating system of the body. Every thought, action, and sensation reflects its activity. Because of its complexity, the structures of the nervous system are described in terms of two principal divisions—the central nervous system (CNS) and the peripheral nervous system (PNS). The CNS, consisting of the brain and spinal cord, interprets incoming sensory information and issues instructions based on past experience. The PNS, consisting of cranial and spinal nerves and ganglia, provides the communication lines between the CNS and the body's muscles, glands, and sensory receptors. The nervous system is also divided functionally in terms of motor activities into the somatic and autonomic divisions. It is important, however, to recognize that these classifications are made for the sake of convenience and that the nervous system acts in an integrated manner both structurally and functionally.

Questions:

1. List the three major functions of the nervous system.

- a. Sensations (sensory input)
- b. Interpretation (integration of info)
- c. Response (commands responses)

2. Choose the key responses that best correspond to the descriptions provided in the following statements. Insert the appropriate letter or term in the answer blanks.

KEY CHOICES: A. Autonomic nervous system
 C. Peripheral nervous system

 B. Central nervous system
 D. Somatic nervous system

- B 1. Nervous system subdivision that is composed of the brain and spinal cord.
- D 2. Subdivision of the PNS that controls voluntary activities such as the activation of skeletal muscles.
- C 3. Nervous system subdivision that is composed of the cranial and spinal nerves and ganglia.
- A 4. Subdivision of the PNS that regulates the activity of the heart and smooth muscle and of glands; it is also called the involuntary nervous system.
- B 5. A major subdivision of the nervous system that interprets incoming information and issues orders.
- C 6. A major subdivision of the nervous system that serves as communication lines, linking all parts of the body to the CNS.

Manual Therapy for Musculoskeletal Pain Syndromes Cesar Fernandez de las Penas, Joshua Cleland, Jan Dommerholt, 2015-04-28 A pioneering one stop manual which harvests the best proven approaches from physiotherapy research and practice to assist the busy clinician in real life screening diagnosis and management of patients with musculoskeletal pain across the whole body Led by an experienced editorial team the chapter authors have integrated both

their clinical experience and expertise with reasoning based on a neurophysiologic rationale with the most updated evidence. The textbook is divided into eleven sections covering the top evidence-informed techniques in massage, trigger points, neural muscle energy manipulations, dry needling, myofascial release, therapeutic exercise, and psychological approaches. In the General Introduction, several authors review the epidemiology of upper and lower extremity pain syndromes and the process of taking a comprehensive history in patients affected by pain. In Chapter 5, the basic principles of the physical examination are covered, while Chapter 6 places the field of manual therapy within the context of contemporary pain neurosciences and therapeutic neuroscience education. For the remaining sections, the textbook alternates between the upper and lower quadrants. Sections 2 and 3 provide state-of-the-art updates on mechanical neck pain, whiplash, thoracic outlet syndrome, myelopathy, radiculopathy, peripartum pelvic pain, joint mobilizations and manipulations, and therapeutic exercises, among others. Sections 4 to 9 review pertinent and updated aspects of the shoulder, hip, elbow, knee, the wrist and hand, and finally the ankle and foot. The last two sections of the book are devoted to muscle-referred pain and neurodynamics. The only one-stop manual detailing examination and treatment of the most commonly seen pain syndromes, supported by accurate scientific and clinical data. Over 800 illustrations demonstrating examination procedures and techniques. Led by an expert editorial team and contributed by internationally renowned researchers, educators, and clinicians. Covers epidemiology and history taking. Highly practical with a constant clinical emphasis.

Spinal Asymmetry and Scoliosis Suzanne Clements Martin, 2018-10-01 Dr. Martin's book provides a theoretical framework and specific progressive exercises in the Pilates environment in their work with those individuals who have asymmetries of the spine, ribcage, and pelvis associated with conditions such as scoliosis. This book helps Pilates instructors who want to move beyond basic certification to work safely and effectively with those who have structural and functional asymmetries. The many musculoskeletal ramifications of spinal asymmetry are explained based on relevant anatomy and current theories of causes of deformity, thus throwing light on an often confusing topic. A developed framework offers practical solutions that will further the body of knowledge in the specialized education of Pilates instructors by enabling them to learn a safe and systematic method of instructing those with scoliosis. This framework helps instructors administer individualized Pilates exercise progressions. These comprise creating a client profile for the individual, developing concepts and considerations for effective exercise delivery and execution, and presentation of those exercise progressions. In addition, two important aspects not yet found within the Pilates field are addressed. The first is the importance of the significant role outlining the scope of practice of the Pilates instructor in the care of those with spinal asymmetries. And secondly is to identify separate approaches necessary for differing populations at distinct times of life. Stages such as youth and adult each require a certain approach.

The decades of young adult mid life and elder years present special challenges due to the co morbidities associated with the adult with scoliosis **Neurosurgical Treatment of Central Nervous System Tumors** Pietro Mortini,Filippo
