Law and Neuroscience: Justice as a Challenge for Neurorights, Neurolaw, and Forensic Psychology Eric García-López, Eduardo Demetrio Crespo, Cristina Nombela Otero, Federica Coppola, 2025-05-29 Justice is one of the most complex issues in the study of Law Philosophical sociological and religious studies have attempted to articulate this value central to human coexistence throughout history More recently specialised sub disciplines such as Legal Psychology have significantly contributed to refining the relationship between Law and Justice by enriching the study of these normative domains with empirical knowledge about social interactions In more recent developments the discipline of Neurolaw has begun to offer new insights into the analysis of the longstanding and disputed issues surrounding Law and Justice Neurolaw can be defined as the analysis of Law and Justice from the perspective of Neuroscience and involves an understanding of human behavior through the study of the brain s interactions with the environment Neuroscience appears to provide a more up to date understanding of human behavior focussing on the legal and forensic implications Yet neuroscientific studies of crime fail to grasp the impact of broader socio contextual contingencies on human conduct including institutional failures gender dynamics and cultural power Such a failure evidences the limits of neuroscience as a complete epistemological tool It is too narrow to provide a complete understanding of complex human conduct like crime as it involves a careful examination of the variegated interactions between various social and biological levels This Research Topic addresses the need for developing a holistic theoretical framework that considers not only the biological nature of human beings but also the social cultural and political influences on human behavior Such a holistic approach is necessary to clarify some foundational philosophical questions including subjectivity and consciousness as well as the role that these concepts play within the notion of criminal liability and punishment In addition to these unresolved philosophical questions there is also the need for a revised legal and forensic approach that grasps a more nuanced and complex understanding of human conduct Topics for contributions include but are not limited to the following Neuroscience Law and Criminal Justice Neuroscience Law and Social Justice Neuroscience Law and Racial Justice Neuroscience and Restorative Justice Neurorights Neuroethics Criminal responsibility Decision making Juvenile Criminal Law and Punishment Free will Ethical legal and social repercussions of the neurotechnologies currently available as well as of those that are currently being developed We welcome submissions from authors with backgrounds in law justice philosophy forensic neuropsychology forensic cognitive social psychology forensic psychiatry criminology sociology addressing theoretical methodological or empirical issues related to these topics and other related ones Cross inter and multidisciplinary contributions are of course welcome

Functional Nanomaterials and Nanocomposites for Biodegradable Food Packaging Madhusudhan Alle, Ruchir Priyadarshi, Shiv Dutt Purohit, 2025-01-16 This book covers the recent developments in biopolymer nanocomposite materials and their possible impact on the food packaging industry The food industry has been one of the

highest consumers of plastics for the past two decades where plastics have been used in huge amounts as food packaging materials. The generation of non biodegradable plastic based municipal solid waste especially due to food packaging industry has now become one of the two paramount problems faced by the world today. The other problem is being the wastage of food in humongous quantities annually. With the onset of globalization food produced in one part of the world became available to people living in another part. However during transportation and storage a plethora of food gets wasted due to microbial contamination or chemical oxidation. This book looks into biopolymer nanocomposites and it's the ability to address both these issues. It presents the very essence of biopolymer nanocomposite technology with the combination of various nanomaterials and biopolymer to yield a functional product for food packaging which is demonstrated in the various chapters. In general this book caters to the needs of students involved in nanotechnology, biotechnology, food technology, industrial chemistry and many others, other interdisciplinary subjects.
