

Writing the Physics Lab Report

Labs are the basis for our understanding of the key concepts in physics. What follows are the guidelines for success in writing a quality lab report.

1. All laboratory reports are to be word-processed.
2. Your name, the name(s) of all members of your laboratory team and the date the investigation was performed is to be written in the upper right hand corner of the first page of each report.
3. An appropriate title for the report should be placed in the center of the first page of the report.
4. Each of the following sections of the laboratory report should be prefaced with the section names.

Purpose This is a statement of the problem to be investigated. It provides the overall direction for laboratory investigation and must be addressed in the conclusion.

Apparatus A list of all laboratory apparatus used in the investigation, along with a detailed diagram to illustrate the configuration of the apparatus, should be included in this section. See example below. The variables to be measured should be clearly pictured.

Procedure This section should identify and name all experimental variables and briefly describe how the independent variables are controlled. Someone who was not present during the lab should be able to understand how the experiment was performed by reading your procedure.

Data Data consists only of those values measured directly from the experimental apparatus. No values obtained by way of mathematical manipulations or interpretations of any kind may be included in this section of the report. Data should consist of as many trials as judgment would indicate necessary. The units for physical measurements (kg , m , s , etc.) in a data table should be specified in column heading only.

Evaluation of Data This section should include all graphs, analysis of graphs, and post laboratory calculations. State each formula, and if necessary, identify the symbols used in the formula. If repetitive calculations are to be performed, substitute *only one set of data* into each formula and then construct a **table of values** for all additional calculated values. Be certain that your final calculated values are expressed to the correct number of significant figures. Do not show your arithmetic calculations.

Conclusion In the conclusion you must do the following:

- a) State the relationship between the variables identified in the purpose in a clear, concise English sentence.
- b) When a mathematical expression can be derived from graphical analysis, write it, making sure to include the appropriate units. State the *meaning of the slope* and discuss the *significance of the y-intercept* (when appropriate).
- c) Describe any new terms that arise as a result of your evaluation of data.
- d) When your results differ from what is expected, provide a plausible explanation.

Hodges, 2023-07-03 This book is written for all science or engineering faculty who have ever found themselves baffled and frustrated by their undergraduate students lack of engagement and learning The author an experienced scientist faculty member and educational consultant addresses these issues with the knowledge of faculty interests constraints and day to day concerns in mind Drawing from the research on learning she offers faculty new ways to think about the struggles their science students face She then provides a range of evidence based teaching strategies that can make the time faculty spend in the classroom more productive and satisfying Linda Hodges reviews the various learning problems endemic to teaching science explains why they are so common and persistent and presents a digest of key ideas and strategies to address them based on the research she has undertaken into the literature on the cognitive sciences and education Recognizing that faculty have different views about teaching different comfort levels with alternative teaching approaches and are often pressed for time Linda Hodges takes these constraints into account by first offering a framework for thinking purposefully about course design and teaching choices and then providing a range of strategies to address very specific teaching barriers whether it be students motivation engagement in class ability to problem solve their reading comprehension or laboratory research or writing skills Except for the first and last chapters the other chapters in this book stand on their own i e can be read in any order and address a specific challenge students have in learning and doing science Each chapter summarizes the research explaining why students struggle and concludes by offering several teaching options categorized by how easy or difficult they are to implement Some for example can work in a large lecture class without a great expenditure of time others may require more preparation and a more adventurous approach to teaching Each strategy is accompanied by a table categorizing its likely impact how much time it will take in class or out and how difficult it will be to implement Like scientific research teaching works best when faculty start with a goal in mind plan an approach building on the literature use well tested methodologies and analyze results for future trials Linda Hodges message is that with such intentional thought and a bit of effort faculty can succeed in helping many more students gain exciting new skills and abilities whether those students are potential scientists or physicians or entrepreneurs Her book serves as a mini compendium of current research as well as a protocol manual a readily accessible guide to the literature the best practices known to date and a framework for thinking about teaching

Designing for Situated Knowledge Transformation Nina Bonderup Dohn, Stig Børsen Hansen, Jens Jørgen Hansen, 2019-11-27 How can knowledge developed in one context be put to use in other contexts How can students learn to do so How can educators design for learning this These are fundamental challenges to many forms of education The challenges are amplified in contemporary society where people traverse many different contexts and where contexts themselves are continuously changing Designing for Situated Knowledge Transformation provides a structured answer to these questions through an investigation of the theoretical empirical methodological and

pedagogical design aspects which they involve Raising profound questions about the nature of knowledge of situativity and of transfer transformation and resituation it calls for and provides extended empirical studies of the forms of transformation that knowledge undergoes when people find themselves in new contexts while relying on existing knowledge Considering many avenues of practical application and insight Designing for Situated Knowledge Transformation develops a coherent framework for developing learning designs for knowledge transformation that is crucial in today s educational settings

Writing across Contexts Kathleen Yancey,Liane Robertson,Kara Taczak,2014-05-15 Addressing how composers transfer both knowledge about and practices of writing Writing across Contexts explores the grounding theory behind a specific composition curriculum called Teaching for Transfer TFT and analyzes the efficacy of the approach Finding that TFT courses aid students in transfer in ways that other kinds of composition courses do not the authors demonstrate that the content of this curriculum including its reflective practice provides a unique set of resources for students to call on and repurpose for new writing tasks The authors provide a brief historical review give attention to current curricular efforts designed to promote such transfer and develop new insights into the role of prior knowledge in students ability to transfer writing knowledge and practice presenting three models of how students respond to and use new knowledge assemblage remix and critical incident A timely and significant contribution to the field Writing across Contexts will be of interest to graduate students composition scholars WAC and writing in the disciplines scholars and writing program administrators

Writing in Context(s) Triantafyllia Kostouli,2006-01-20 The premise that writing is a socially situated act of interaction between readers and writers is well established This volume first corroborates this premise by citing pertinent evidence through the analysis of written texts and interactive writing contexts and from educational settings across different cultures from which we have scant evidence Secondly all chapters though addressing the social nature of writing propose a variety of perspectives making the volume multidisciplinary in nature Finally this volume accounts for the diversity of the research perspectives each chapter proposes by situating the plurality of terminological issues and methodologies into a more integrative framework Thus a coherent overall framework is created within which different research strands i e the sociocognitive sociolinguistic research composition work genre analysis and pedagogical practices developed on L1 and L2 writing can be situated and acquire meaning This volume will be of particular interest to researchers in the areas of language and literacy education in L1 and L2 applied linguists interested in school and academic contexts of writing teacher educators and graduate students working in the fields of L1 and L2 writing
