## Physics Paper 2 Exemplar June 2014:

*Physics and Literature* Aura Heydenreich, Klaus Mecke, 2021-12-20 Physics and Literature is a unique collaboration between physicists literary scholars and philosophers the first collection of essays to examine together how science and literature beneath their practical differences share core dimensions forms of questioning thinking discovering and communicating insights This book advances an in depth exploration of relations between physics and literature from both perspectives It turns around the tendency to discuss relations between literature and science in one sided and polarizing ways The collection is the result of the inaugural conference of ELINAS the Erlangen Center for Literature and Natural Science an initiative dedicated to building bridges between literary and scientific research ELINAS revitalizes discussion of science literature interconnections with new topics ideas and angles by organizing genuine dialogue among participants across disciplinary lines The essays explore how scientific thought and practices are conditioned by narrative and genre fiction models and metaphors and how science in turn feeds into the meaning making of literary and philosophical texts These interdisciplinary encounters enrich reflections on epistemology cognition and aesthetics

**Psychoanalytical neuroscience: Exploring psychoanalytic concepts with neuroscientific methods** Nikolai Axmacher, Henrik Kessler, Gerd Thomas Waldhauser, 2015-01-09 Sigmund Freud was a trained neuroanatomist and wrote his first psychoanalytical theory in neuroscientific terms Throughout his life he maintained the belief that at some distant day in the future all psychoanalytic processes could be tied to a neural basis We must recollect that all of our provisional ideas in psychology will presumably one day be based on an organic substructure Freud 1914 On Narcissism An Introduction Fundamental Freudian concepts reveal their foundation in the physiological science of his time most importantly among them the concept of libidinous energy and the homeostatic principle of constancy However the subsequent history of psychoanalysis and neuroscience was mainly characterized by mutual ignorance or even opposition many scientists accused psychoanalytic viewpoints not to be scientifically testable and many psychoanalysts claimed that their theories did not need empirical support outside of the therapeutic situation On this historical background it may appear surprising that the recent years have seen an increasing interest in re connecting psychoanalysis and neuroscience in various ways By studying psychodynamic consequences of brain lesions in neurological patients by investigating how psychoanalytic therapy affects brain structure and function or even by operationalizing psychoanalytic concepts in well controlled experiments and exploring their neural correlates These empirical studies are accompanied by theoretical work on the philosophical status of the neuropsychanalytic endeavour In this volume we attempt to provide a state of the art overview of this new exciting field All types of submissions are welcome including research in patient populations healthy human participants and animals review articles on some empirical or theoretical aspect and of course also critical accounts of the new field Despite this welcome variability we would like to suggest that all contributions attempt to address one or both of two main questions

which should motivate the connection between psychoanalysis and neuroscience and that in our opinion still remain exigent First from the neuroscientific side why should researchers in the neurosciences address psychoanalytic ideas and what is or will be the impact of this connection on current neuroscientific theories Second from the psychoanalytic side why should psychoanalysts care about neuroscientific studies and how can current psychoanalytical theory and practice benefit from their results Of course contributors are free to provide a critical viewpoint on these two questions as well

**Not Here, Not Now** Anthony Dunne, Fiona Raby, 2025-05-06 What it means to design at a time when for many people the future seems to have become an impossibility When reality fails us what can designers do Question design's relationship to reality as Anthony Dunne and Fiona Raby do in this exhilarating yet thoughtful journey to the edges of science philosophy and literature to find new ways of thinking about the possible and about the meaning function and place of design in that speculative world of not here not now A conceptual travelogue of sorts Not Here Not Now brings together words images and objects that capture in design form some of the ideas encountered along the way Itself a design experiment the richly illustrated book explores ways to bring these ideas into conversation with objects through imagined archives libraries glossaries taxonomies lists tales and essays The design responses in Not Here Not Now to a stone raft for example or a vegetable lamb swatches of imaginary colors a pocket universe in the home objects undergoing space time collapse are like the most compelling utopias impossible by design aiming instead to nourish the creative intellectual and imaginative ground from which new possibilities still unknown might begin to emerge

**The Metric Tide** James Wilsdon, 2016-01-20 Represents the culmination of an 18 month long project that aims to be the definitive review of this important topic Accompanied by a scholarly literature review some new analysis and a wealth of evidence and insight the report is a tour de force a once in a generation opportunity to take stock Dr Steven Hill Head of Policy HEFCE LSE Impact of Social Sciences Blog A must read if you are interested in having a deeper understanding of research culture management issues and the range of information we have on this field It should be disseminated and discussed within institutions disciplines and other sites of research collaboration Dr Meera Sabaratnam Lecturer in International Relations at the School of Oriental and African Studies University of London LSE Impact of Social Sciences Blog Metrics evoke a mixed reaction from the research community A commitment to using data and evidence to inform decisions makes many of us sympathetic even enthusiastic about the prospect of granular real time analysis of our own activities Yet we only have to look around us at the blunt use of metrics to be reminded of the pitfalls Metrics hold real power they are constitutive of values identities and livelihoods How to exercise that power to positive ends is the focus of this book Using extensive evidence gathering analysis and consultation the authors take a thorough look at potential uses and limitations of research metrics and indicators They explore the use of metrics across different disciplines assess their potential contribution to the development of research excellence and impact and consider the changing ways in which universities are using quantitative indicators in their management systems Finally they

consider the negative or unintended effects of metrics on various aspects of research culture Including an updated introduction from James Wilsdon the book proposes a framework for responsible metrics and makes a series of targeted recommendations to show how responsible metrics can be applied in research management by funders and in the next cycle of the Research Excellence Framework The metric tide is certainly rising Unlike King Canute we have the agency and opportunity and in this book a serious body of evidence to influence how it washes through higher education and research

**Quantum Interaction** Harald Atmanspacher, Emmanuel Haven, Kirsty Kitto, Derek Raine, 2014-04-17 This book constitutes the refereed proceedings of the 7th International Conference on Quantum Interaction QI 2013 held in Leicester UK in July 2013 The 31 papers presented in this book were carefully selected from numerous submissions The papers cover various topics on quantum interaction and revolve around four themes information processing retrieval semantic representation and logic cognition and decision making finance economics and social structures and biological systems

*Thinking with Feeling* Douglas P. Newton, 2014-03-05 Are emotions good or bad for thinking and learning Have you ever wondered why a good lesson of one year falls flat in another Why do students behave the way they do Teachers are expected to foster productive thought yet the neglect of emotion in the classroom in favour of intellect means teaching and learning is often not as effective as it might be *Thinking with Feeling* explores what we mean by productive thought its interrelationship with mood and emotions how teachers can manage that interaction to improve teaching and learning and what teacher trainers could do about it Synthesising the most important international research in the field it offers a framework for productive purposeful thought deduction understanding creative thinking wise thinking and critical thinking and explains how mood and emotion can support and also impede learning It considers the effect of the interplay of emotion and intellect on classroom behaviour on students public performance and performance in tests and how emotional labour can affect the teacher Illustrated with examples from practice this challenging thoughtful study offers education professionals a basis for understanding the interaction of emotions and cognition and making it a successful partnership in order to improve teaching and learning

**Scientific Authorship** Mario Biagioli, Peter Galison, 2014-01-27 Since the seventeenth century our ideas of scientific authorship have expanded and changed dramatically In this ambitious volume of new work Mario Biagioli and Peter Galison have brought together historians of science literary historians and historians of the book Together they track the changing nature and identity of the author in science both historically and conceptually from the emergence of scientific academies in the age of Galileo to concerns with large scale multiauthorship and intellectual property rights in the age of cloning labs and pharmaceutical giants How for example do we decide whether a chemical compound is discovered or invented What does it mean to patent genetic material Documenting the emergence of authorship in the late medieval period authorship s limits and its fragmentation *Scientific Authorship* offers a collective history of a complex relationship
