Discourse and language learning across L2 instructional settings ,2012-01-01 Studies on discourse and language learning originated in the field of general education and they focused on first language learning environments However since 1980s research on discourse and language learning broadened the scope of investigation to respond to second and foreign language environments Recently the emergence of new language learning contexts such as computer mediated communication multilingual settings or content and language integrated contexts requires further research that focuses on discourse and language learning From this perspective the present volume aims to broaden the scope of investigation in foreign language contexts by exploring discourse patterns in the classroom and examining the impact of factors such as gender explicitness of feedback or L1 use on language learning through discourse With that aim in mind this volume will bring together research that investigates discourse in various instructional settings namely those of primary secondary and university L2 learning environments content and language integrated contexts and other new language learning settings The number and variety of languages involved both as the first language e g English Finnish Basque Spanish Japanese French Italian Catalan as well as the target foreign language e g English French Italian Japanese Spanish makes the volume specially attractive Additionally the different approaches adopted by the researchers participating in this volume such as information

processing sociocultural theory or conversation analysis widen the realm of investigation on discourse and language learning. Finally the strength of the volume also lies in the range of educational settings primary secondary and tertiary education and the worldwide representation of contributors across seven different countries namely those of Spain France Austria Finland Germany Canada Australia and the United States. The uniqueness of the volume is due to its eclectic and comprehensive nature in tackling instructional discourse. Worldwide outstanding researchers like Julianne House Carme Mu oz Ute Smit Tarja Nikula or Roy Lyster to quote but a few adopt different perspectives in this joint contribution that will certainly broaden the scope of research on language learners discourse.

Foundation: Whole Numbers in the Primary Grades Maria G. Bartolini Bussi,Xu Hua Sun,2018-03-29 This twenty third ICMI Study addresses for the first time mathematics teaching and learning in the primary school and pre school setting while also taking international perspectives socio cultural diversity and institutional constraints into account. One of the main challenges of designing the first ICMI primary school study of this kind is the complex nature of mathematics at the early level. Accordingly a focus area that is central to the discussion was chosen together with a number of related questions. The broad area of Whole Number Arithmetic WNA including operations and relations and arithmetic word problems forms the core content of all primary mathematics curricula. The study of this core content area is often regarded as foundational for later mathematics learning. However the principles and main goals of instruction on the foundational concepts and skills in WNA are far from universally agreed upon and practice varies substantially from country to country. As such this study presents a meta level analysis and synthesis of what is currently known about WNA providing a useful base from which to gauge gaps and shortcomings as well as an opportunity to learn from the practices of different countries and contexts.

Psychological Studies in the Teaching, Learning and Assessment of Mathematics Yiming Cao,Zsolt Lavicza ,Shuhua An,Lianchun Dong,2024-05-31 There is no doubt that the onset of a new decade has brought high expectations of academic progress for scholars especially for researchers in mathematics education. The International Group for the Psychology of Mathematics Education was born in 1976 which focused on the international exchange of knowledge in the psychology of mathematics education the promotion of interdisciplinary research with psychologists mathematicians and mathematics teachers and the development of the psychological aspects of teaching and learning mathematics and its implications.
