The Pragmatist Challenge H. K. Andersen, Sandra D. Mitchell, 2023-05-18 The Pragmatist Challenge lays out a programmatic view for taking a pragmatist approach to topics in philosophy of science and metaphysics Pragmatism involves a collection of specific views as well as comprising a general approach that can be applied to multiple topics For topics at the intersection of philosophy of science and metaphysics pragmatism as explored in this volume is an effective way to take entrenched debates and re frame them in ways that move past old dichotomies and offer more fruitful paths forward Each chapter explores a dual vision of pragmatism specific pragmatist views are developed demonstrating how to take a distinctively pragmatist approach to some particular issue or subfield and the general shape of what it means to take a pragmatist approach is elucidated as well The chapters thus tend to be synoptic in scope Collectively they offer a new approach that can be taken up in constructively reframing other discussions ready to be applied to new specific topics Pragmatism is an especially potent tool that sits at the interface between methodological and applied questions coming directly from sciences and the underlying ontological or metaphysical commitments that are implied by or support the methodological discussions The goal of the volume is to articulate a variety of ways to be a pragmatist without having to commit to a single specific set of isms in order to make use of it while highlighting the common themes that manifest across different discussions The chapters offer a heterogenous yet programmatic approach to pragmatism

Visualizing Dynamic Systems Mojgan M Haghanikar, 2022-06-01 This book is aimed to help instructional designers science game designers science faculty lab designers and content developers in designing interactive learning experiences using emerging technologies and cyberlearning The proposed solutions are for undergraduate and graduate scientific communication engineering courses scientific research communication and workforce training Reviewing across the science education literature reveals various aspects of unresolved challenges or inabilities in the visualization of scientific concepts Visuospatial thinking is the fundamental part of learning sciences however promoting spatial thinking has not been emphasized enough in the educational system Hegarty 2014 Cognitive scientists distinguish between the multiple aspects of spatial ability and stress that various problems or disciplines require different types of spatial skills For example the spatial ability to visualize anatomy cross sections is significantly associated with mental rotation skills The same is true for physical problems that often deal with spatial representations However most of the physics problems are marked by dynamicity and visualizing dynamicity is inferred by the integrations of different participating components in the system Therefore what is needed for learning dynamicity is visualizing the mental animation of static episodes This book is a leap into designing framework for using mixed reality XR technologies and cyberlearning in communicating advanced scientific concepts The intention is to flesh out the cognitive infrastructure and visuospatial demands of complex systems and compare them in various contexts and disciplines The practical implementation of emerging technology can be achieved by foreseeing each XR technology's affordances and mapping those out to the cognitive infrastructure and visuospatial demands of the content under development
