Design-Tech: Building Science for Architects Jason Alread, Thomas Leslie, Rob Whitehead, 2025-03-19 The third edition of Design Tech provides an indispensable holistic resource for integrating building technologies into critically designed performance based architectural projects. The book's format follows the developmental stages of a typical architectural project; it provides a step by step process for addressing and integrating building sciences from first principles of human comfort, materials, structures and environmental systems to advanced construction systems and measures of building performance. Short chapters incorporate easy to understand information with hundreds of useful illustrations, tables and references that explain the why as well as the how of building science. The content focuses on what designers need to know in the studio to create sustainably designed integrated buildings and it prepares them for future discussions with engineers, contractors and consultants. The updated format builds a coherent framework for integrated project design studio development necessary for all contemporary accredited schools of architecture. Chapters build upon critical project information from schematics toward technical integration. New chapters emphasize performance based design strategies including sustainable design values, critical schematic planning, enhanced building envelope design strategies and advanced performance systems. Enhanced visualization of schematic design strategies helps explain sustainable design standards, code compliance and structural schematics and throughout the third edition focuses on contemporary issues such as embodied carbon, heavy timber construction, life cycle costs and long term performance. This will be a must read for all architecture students looking for an accessible guide to building science.

Mechanisms of Bluff Bodies and Road Vehicles Gino Sovran, 2012-12-06 These Proceedings contain the papers and oral discussions presented at the Symposium on AERODYNAMIC DRAG MECHANISMS of Bluff Bodies and Road Vehicles held at the General Motors Research Laboratories in Warren Michigan on September 27 and 28 1976 This international invitational Symposium was the twentieth in an annual series each one having been in a different technical discipline The Symposia provide a forum for areas of science and technology that are of timely interest to the Research Laboratories as well as the technical community at large and in which personnel of the Laboratories are actively involved The Symposia furnish an opportunity for the exchange of ideas and current knowledge between participating research specialists from educational industrial and governmental institutions and serve to stimulate future research activity The present world wide energy situation makes it highly desirable to reduce the force required to move road vehicles through the atmosphere A significant amount of the total energy consumed for transportation is expended in overcoming the aerodynamic resistance to motion of these vehicles Reductions in this aerodynamic drag can therefore have a large impact on ground transportation energy requirements Although aerodynamic development work on road vehicles has been performed for many years it has not been widely reported or accompanied by much basic research

Stereology and Stochastic Geometry John E. Hilliard, Lawrence Lawson, 2003-11-30 Somebody had to do it The Chinese speak of deep water wells called grandfather wells because they take three generations of diggers to complete Imagine the thought of such a well being abandoned incomplete by the third generation What a loss This book is like a grandfather well except that it has taken only two generations John Hilliard s and mine to finish When I saw his manuscript lying in a heap I decided that I must spend the time to put it and his notes into a publishable form Now it is done This book is mostly about performing spatial measurements through the statistical sampling of images it is a text on classical stereology as John Hilliard saw it His vision

of the subject was broad Consequently its title is broad too It presents this subject and some of its modern extensions from the classical perspective of the one of the founders of the field and my first advisor at Northwestern University John Hilliard There is nothing new in this book but much that may have been lost over time It rediscovers many useful discussions about such subjects as the variances of stereo logical measurements anisotropy etc It recovers some of the dialogues between John Hilliard and his students on such topics as fractals and Monte Carlo simulations It recaptures a little of John Hilliard's unique and subtle wit
