Chapter 6 - States of Consciousness

Consciousness

What is considered consciousness?

- Consciousness is defined as moment to moment awareness of ourselves and our environment.
- Intimately connected to with the process of selective attention (Review Chapter 5)
- Dynamic and ever changing
- Subjective as well as private

Measuring States of Consciousness

- **Self Report:** Description of our inner experiences, the awareness of our own body and its role in the environment
- **Physiological Measures:** establishes the correspondence between bodily states and mental processes (EEG recording of brain activity in sleep)
- **Behavioral Measures:** those in which some other aspect of participants' behavior is observed and recorded. (Rouge test)

Levels of Consciousness

- **Conscious Mind:** Contains thoughts, perceptions and other mental events that we are currently aware of.
- **Preconscious:** mental events that are currently not in our mental awareness (a person may not be thinking of their address but can recall the information)
- **Unconscious:** cannot be brought into consciousness under ordinary circumstances. Some things are kept here out of shame, guilt etc (concealed phobias and suppressed emotions)
- **Subconscious:** the part of one's consciousness that one is not fully aware of yet, influences their decisions and behaviors.

The Cognitive Viewpoint:

- **Controlled vs Automatic Processing:**
 - ↳ **Controlled:** the voluntary use of attention and conscious effort (Paying attention to a lecture)
 - Automatic:** can be performed with little to no conscious effort (seeing or reading)
- **Divided Attention:** the ability to perform or do more than one task at a time. In other words, multitasking.
- **Emotional Unconscious:** Emotional and motivational processes also operate unconsciously and influence behavior

Construction Safety Management, A Systems Approach Jose D. Pérezgonzález, 2005 The few models on safety management that are available tend to explain a procedure to manage safety rather than a safety management system The research carried out here however models safety management by transforming a common procedural model i e the HSE s model 1997 into a functional systems representation The overall goal of the model is to offer clear graphic lines of influence of its different components on organisational safety The model is innovative not in the components that it considers but in the representation of those components which details relative distances between elements and therefore opens doors to model driven hypotheses which account for those distances Therefore hypotheses are more accurate in their predictions This model is firstly explored in the construction sector Results from this exploratory research support the adequacy of the model to understanding safety management and encourage future research of a more confirmatory nature **An Alternative Way of**

Illustrating Concepts and Phenomena in Psychology E. Leslie Cameron, Douglas A. Bernstein, 2022-08-29 This compendium of examples of psychological concepts and phenomena is designed to make it easier for both novice and experienced teachers of psychology at all levels to bring new and or particularly illuminating examples to their lectures and other presentations Psychology instructors know that vivid examples bring concepts to life for students making psychology both more accessible and interesting Having a good supply of such examples can be particularly important when as often happens students fail to immediately grasp particular points especially those that are complex or difficult Generating compelling examples can be challenging particularly when teaching a course such as Introductory Psychology in which much of the material is outside one s main area of expertise when teaching a course for the first time or when teaching a course that is entirely outside one s main area of expertise This compendium will serve as a one stop reference that presents a topic organized body of compelling examples that instructors can explore as they prepare their teaching materials The examples they will find range from simple illustrations e g muting an obnoxious commercial as an example of negative reinforcement to videos e g of a patient with prosopagnosia to brief stories e g about how confirmation bias led a man to dismantle a kitchen

because he assumed that an electrical stove s whining clock was a trapped kitten to short summaries of research that illustrate a concept or phenomenon Beyond their value for enhancing the quality and interest level of classroom lectures the examples in this book can help teachers find ideas for engaging multiple choice exam and quiz items They can also serve as stimuli for writing assignments and small group discussions in which students are asked to come up with additional examples of the concept or phenomenon or link them to other concepts or phenomena
