Written in a conversational and easy to understand style this is not a textbook as much as it is a resource book. An underlying assumption is that facilitating teacher understanding using the same questions and activities that may be used with children is one way to help teachers build the comfort and confidence they need to begin talking to children about complex ideas. Unlike a textbook that is used to study formal theory and then discarded when it comes to putting ideas into practice the many problems and activities included to facilitate teacher learning are valuable resources for use in elementary and middle school classrooms. Changes in the second edition include even more student work incorporated in every chapter discussion of the connectivity between the topics addressed in the book and the elementary and middle school mathematics curricula, an increased emphasis on measurement expansion of some topics including number sense, percent, scale factors, similarity, and linear graphs, clarification of the characteristics of ratio and proportions and how to use these to generate discussion with children, and content related interview questions for exploring children's thinking. This book is a valuable resource for researchers and curriculum developers in mathematics education, pre-service and in-service teachers of mathematics, those involved in the mathematical and pedagogical preparation of mathematics teachers, and graduate students in mathematics education. The methods and activities it includes have been tested with students in grades 3-8 and with pre-service and in-service teachers and other adults. This text is accompanied by MORE, a supplement that is not merely an answer key but a resource that includes in-depth discussions of all the problems in the text, develops and extends discussion of the issues, teaching problems, and other considerations raised in the chapters, and contains additional problems with and without solutions that instructors may find helpful for assessment purposes.

Prioritizing Urban Children, Teachers, and Schools through Professional Development Schools Pia Lindquist Wong, Ronald David Glass, 2009-03-17 How can we better educate disadvantaged urban students? Drawing on over five years' experience in a broad partnership involving twelve urban professional development schools in five districts, a teachers union, a comprehensive public university, and several community-based organizations, the contributors to this volume describe how they worked together to help disadvantaged urban students through an innovative professional development program. By networking with educators at different levels and coordinating curriculum projects, they were able to begin overcoming rigid and ineffective mandates and curricula tied to standardized test scores and get through to their students on more meaningful and productive levels. The contributors share their successes and failures with these efforts as well as insights related to the ethical, political, and academic challenges faced by professional development schools.
