**Diagrammatic Representation and Inference** Ashok K Goel, Mateja Jamnik, N Hari Narayanan, 2010-07-27. The 6th International Conference on the Theory and Application of Diagrams (Diagrams 2010) was held in Portland USA in August 2010. Diagrams is an international and interdisciplinary conference series which continues to present the very best work in all aspects of research on the theory and application of diagrams. Some key questions that researchers are tackling concern gaining an insight into how diagrams are used, how they are represented, which types are available, and when it is appropriate to use them. The use of diagrammatic notations is studied for a variety of purposes including communication, cognition, creative thought, computation, and problem solving. Clearly, this must be pursued as an interdisciplinary endeavor, and Diagrams is the only conference series that provides such a united forum for all areas that are concerned with the study of diagrams, for example, architecture, artificial intelligence, cartography, cognitive science, computer science, education, graphic design, history of science, human computer interaction, linguistics, logic, mathematics, philosophy, psychology, and software modelling. The articles in this volume reflect this variety and interdisciplinarity of the field.
