

Vertex Form Problem Answer Key

The path of water from a sprinkler can be modeled by a quadratic function. The three functions below model the path of the water for three different sprinklers.

Sprinkler A: $y = -2x^2 + 12x - 15$

Sprinkler B: $y = -(x - 4)^2 + 2$

Sprinkler C: y-intercept (0, -21)

Vertex (5, 4) $a = -1$

Axis of Symmetry: $x = 5$

A. Write the equation for Sprinkler A in vertex form.

$$y = -2x^2 + 12x - 15$$

$$x = \frac{-b}{2a} = \frac{-12}{2(-2)} = 3$$

$$y = -2(3)^2 + 12(3) - 15 = -18 + 36 - 15 = 3$$

Vertex (3, 3)

$$y = -2(x - 3)^2 + 3$$

B. Write the equation for Sprinkler B in standard form.

$$y = -(x - 4)^2 + 2$$

$$y = -x^2 + 8x - 16 + 2$$

$$y = -x^2 + 8x - 14$$

C. Write the equation for Sprinkler C in vertex form.

y-intercept (0, -21)

Vertex (5, 4) $a = -1$

Axis of Symmetry: $x = 5$

$$y = -(x - 5)^2 + 4$$

The Geometry of the Word Problem for Finitely Generated Groups Noel Brady, Tim Riley, Hamish Short, 2007-05-11 The origins of the word problem are in group theory decidability and complexity But through the vision of M Gromov and the language of filling functions the topic now impacts the world of large scale geometry This book contains accounts of many recent developments in Geometric Group Theory and shows the interaction between the word problem and geometry continues to be a central theme It contains many figures numerous exercises and open questions **Word Problems** Lev D. Beklemishev, 2000-04-01 Word Problems The Compressed Word Problem for Groups Markus Lohrey, 2014-04-04 The Compressed Word Problem for Groups provides a detailed exposition of known results on the compressed word problem emphasizing efficient algorithms for the compressed word problem in various groups The author presents the necessary background along with the most recent results on the compressed word problem to create a cohesive self contained book accessible to computer scientists as well as mathematicians Readers will quickly reach the frontier of current research which makes the book especially appealing for students looking for a currently active research topic at the intersection of group theory and computer science The word problem introduced in 1910 by Max Dehn is one of the most important decision problems in group theory For many groups highly efficient algorithms for the word problem exist In recent years a new technique based on data compression for providing more efficient algorithms for word problems has been developed by representing long words over group generators in a compressed form using a straight line program Algorithmic techniques used for manipulating compressed words has shown that the compressed word problem can be solved in polynomial time for a large class of groups such as free groups graph groups and nilpotent groups These results have important implications for algorithmic questions related to automorphism groups **METHODS OF SOLVING PROBLEMS IN Elementary, Middle, and High School MATHEMATICS** Mihai Rosu, 2010-11-19 I take great pleasure in recommending this book to all students but especially those involved in the IB and AP programs Use it alongside your textbooks and notes for maximum results

V. Ivanov,2020-05-13 The author introduces and studies the bounded word problem and the precise word problem for groups given by means of generators and defining relations For example for every finitely presented group the bounded word problem is in NP i e it can be solved in nondeterministic polynomial time and the precise word problem is in PSPACE i e it can be solved in polynomial space The main technical result of the paper states that for certain finite presentations of groups which include the Baumslag Solitar one relator groups and free products of cyclic groups the bounded word problem and the precise word problem can be solved in polylogarithmic space As consequences of developed techniques that can be described as calculus of brackets the author obtains polylogarithmic space bounds for the computational complexity of the diagram problem for free groups for the width problem for elements of free groups and for computation of the area defined by polygonal singular closed curves in the plane The author also obtains polynomial time bounds for these problems **Eureka Math Algebra II Study Guide** Great Minds,2016-08-15 The team of teachers and mathematicians who created Eureka Math believe that it s not enough for students to know the process for solving a problem they need to know why that process works That s why students who learn math with Eureka can solve real world problems even those they have never encountered before The Study Guides are a companion to the Eureka Math program whether you use it online or in print The guides collect the key components of the curriculum for each grade in a single volume They also unpack the standards in detail so that anyone even non Eureka users can benefit The guides are particularly helpful for teachers or trainers seeking to undertake or lead a meaningful study of the grade level content in a way that highlights the coherence between modules and topics We re here to make sure you succeed with an ever growing library of resources Take advantage of the full set of Study Guides available for each grade PK 12 or materials at eureka math org such as free

Kostrikin, 1992 [The Concise Handbook of Algebra](#) Alexander V. Mikhalev, G.F. Pilz, 2013-06-29 It is by no means clear what comprises the heart or core of algebra the part of algebra which every algebraist should know Hence we feel that a book on our heart might be useful We have tried to catch this heart in a collection of about 150 short sections written by leading algebraists in these areas These sections are organized in 9 chapters A B I Of course the selection is partly based on personal preferences and we ask you for your understanding if some selections do not meet your taste for unknown reasons we only had problems in the chapter Groups to get enough articles in time We hope that this book sets up a standard of what all algebraists are supposed to know in their chapters interested people from other areas should be able to get a quick idea about the area So the target group consists of anyone interested in algebra from graduate students to established researchers including those who want to obtain a quick overview or a better understanding of our selected topics The

prerequisites are something like the contents of standard textbooks on higher algebra This book should also enable the reader to read the big Handbook Hazewinkel 1999 and other handbooks In case of multiple authors the authors are listed alphabetically so their order has nothing to do with the amounts of their contributions
