Raghavan,2010-04-26 This book constitutes the refereed proceedings of the 9th IFIP TC6 Networking Conference Networking 2010 Papers were solicited in three broad topic areas applications and services network technologies and internet design All papers were considered on

their merits by a unified Technical Program Committee (TPC) there was no attempt to enforce a quota among topic areas. We believe the resulting program is an excellent representation of the breadth of recent advances in networking research. This year the conference received 101 full paper submissions from 23 countries on 6 continents reflecting a strong diversity in the networking community. Similarly, the 92 members of the TPC are from 21 countries and include a mix of academic, industry, and governmental affiliations. The TPC members, aided by some 50 external reviewers, provided a total of 470 reviews and follow-up discussions totaling more than 200 messages. The final selections were made at a TPC meeting hosted by Columbia University in New York City with both in-person and remote participation. In total, authors of accepted papers have academic and industry affiliations in 15 countries. We finally selected 24 papers for presentation during the conference technical sessions. A small number of papers were assigned a shepherd from the TPC to assist in paper revision. These statistics represent an acceptance rate of just under 24%, comparable to that of previous years. The TPC also identified several papers that reflect particularly promising early results; these papers were selected for presentation as work-in-progress papers and are identified as such in the proceedings.

*Caterer & Hotelkeeper*, 1996  
*Microwaves in Organic and Medicinal Chemistry*. C. Oliver Kappe, Alexander Stadler, Doris Dallinger, 2012-05-21. Tailored to the needs of medicinal and natural products chemists, the second edition of this unique handbook brings the contents up to speed, almost doubling the amount of chemical information with an additional volume. As in the predecessor, a short introductory section covers the theoretical background and evaluates currently available instrumentation and equipment. The main part of the book then goes on to systematically survey the complete range of published microwave-assisted synthesis methods from their beginnings in the 1990s to mid-2011, drawing on data from more than 5,000 reports and publications. Throughout, the focus is on those reactions, reagents, and reaction conditions that work and that are the most relevant for medicinal and natural products chemistry. A much-expanded section is devoted to combinatorial high-throughput and flow chemistry methods.
