

Cells: Membrane Structures and their Functions

Controlled Substances

Why?

You are cramming for finals. Your notes from all of your classes are spread throughout your room, car and backpack. You look at your schedule of exams and find that your Biology test is tomorrow. You then begin the process of organizing your books, notes, and other information, separating them by subject and accumulating them so that your studying is more efficient. A plasma membrane acts as an organizer in cells, compartmentalizing internal structures. The cell membrane acts as a boundary between the cell and the external environment.

Model 1

1. In what part of the cell is the cell membrane located?

The outer part

2. On the enlargement in Model 1, label the inside and outside of the cell.

The inside of the cell would be located above the upper phosphate head.

3. In Model 1, what biomolecules compose the cell membrane?

Proteins, lipids, phospholipids

4. How many layers of phospholipids compose the membrane?

2

5. The proteins are labeled with letters. How many proteins are in Model 1?

3

6. Do all of the proteins in Model 1 touch the inside and the outside of the cell (membrane spanning)?

No. One of the proteins touches only one or the other. This is called the peripheral protein.

7. Label on the diagram which areas of each of the membrane components in Model 1 would be polar and nonpolar.

The inside of the membrane is nonpolar while the outside is polar.
