**Contemporary Geometry** Hung-Hsi Wu, 2013-06-29 Early one morning in April of 1987 the Chinese mathematician J Q Zhong died unexpectedly of a heart attack in New York He was then near the end of a one year visit in the United States When news of his death reached his Chinese American friends it was immediately decided by one and all that something should be done to preserve his memory The present volume is an outgrowth of this sentiment His friends in China have also established a Zhong Jia Qing Memorial Fund which has since twice awarded the Zhong Jia Qing prizes for Chinese mathematics graduate students It is hoped that at least part of the reasons for the esteem and affection in which he was held by all who knew him would come through in the succeeding pages of this volume The three survey chapters by Li and Treibergs Lu and Siu Chapters 1 3 all center around the areas of mathematics in which Zhong made noteworthy contributions In addition to putting Zhong s mathematical contributions in perspective these articles should be useful also to a large segment of the mathematical community together they give a coherent picture of a sizable portion of contemporary geometry The survey of Lu differs from the other two in that it gives a firsthand account of the work done in the People s Republic of China in several complex variables in the last four decades

**Encyclopaedia of Mathematics** M. Hazewinkel, 2013-11-11

**Lecture Notes on Elementary Topology and Geometry** I.M. Singer, J.A. Thorpe, 2015-05-28 At the present time the average undergraduate mathematics major finds mathematics heavily compartmentalized After the calculus he takes a course in analysis and a course in algebra Depending upon his interests or those of his department he takes courses in special topics If he is exposed to topology it is usually straightforward point set topology if he is exposed to geometry it is usually classical differential geometry The exciting revelations that there is some unity in mathematics that fields overlap that techniques of one field have applications in another are denied the undergraduate He must wait until he is well into graduate work to see interconnections presumably because earlier he doesn t know enough These notes are an attempt to break up this compartmentalization at least in topology geometry What the student has learned in algebra and advanced calculus are used to prove some fairly deep results relating geometry topology and group theory De Rham s theorem the Gauss Bonnet theorem for surfaces the functorial relation of fundamental group to covering space and surfaces of constant curvature as homogeneous spaces are the most noteworthy examples In the first two chapters the bare essentials of elementary point set topology are set forth with some hint of the subject s application to functional analysis

**Encyclopaedia of Mathematics** Michiel Hazewinkel, 2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of

articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques

Proof and Other Dilemmas Bonnie Gold, Roger A. Simons, 2008 During the first 75 years of the twentieth century almost all work in the philosophy of mathematics concerned foundational questions In the last quarter of the century philosophers of mathematics began to return to basic questions concerning the philosophy of mathematics such as what is the nature of mathematical knowledge and of mathematical objects and how is mathematics related to science Two new schools of philosophy of mathematics social constructivism and structuralism were added to the four traditional views formalism intuitionism logicism and platonism The advent of the computer led to proofs and the development of mathematics assisted by computer and to questions of the role of the computer in mathematics This book of 16 essays all written specifically for this volume is the first to explore this range of new developments in a language accessible to mathematicians Approximately half the essays were written by mathematicians and consider questions that philosophers are not yet discussing The other half written by philosophers of mathematics summarize the discussion in that community during the last 35 years In each case a connection is made to issues relevant to the teaching of mathematics

**Dynamics on Differential One-Forms** Troy L. Story, 2002 Dynamics on Differential One Forms proposes a unifying principle for mathematical models of dynamic systems In Thermodynamics on One Forms chapter I the long standing problem of deriving irreversibility in thermodynamics from reversibility in Hamiltonian mechanics is solved Differential geometric analysis shows thermodynamics and Hamiltonian mechanics are both irreversible on representative extended phase spaces Dynamics on Differential One Forms II generalizes I to Hamiltonian mechanics geometric optics thermodynamics black holes electromagnetic fields and string fields Mathematical models for these systems are revealed as representations of a unifying principle namely description of a dynamic system with a characteristic differential one form on an odd dimensional differentiable manifold leads by analysis with exterior calculus to a set of differential equations and a tangent vector defining system transformations Relationships between models using exterior calculus and conventional calculus imply a technical definition of dynamic equilibrium Global Analysis of Composite Particles III uses differential

topology to develop the theory of large vibration rotation interactions for composite particles A global classical Hamiltonian and corresponding quantum Hamiltonian operator are derived then applied to the molecular vibration rotation problem Characteristic Electromagnetic and Yang Mills Gauge IV uses differential geometry to remove some of the arbitrariness in the gauge and shows how gauge functions for electromagnetic and Yang Mills fields follow the same differential equation

**Journal of Differential Geometry ,1975      Nonlinear Waves and Solitons on Contours and Closed Surfaces**

Andrei Ludu,2022-11-04 This new edition has been thoroughly revised expanded and contain some updates function of the novel results and shift of scientific interest in the topics The book has a Foreword by Jerry L Bona and Hongqiu Chen The book is an introduction to nonlinear waves and soliton theory in the special environment of compact spaces such a closed curves and surfaces and other domain contours It assumes familiarity with basic soliton theory and nonlinear dynamical systems The first part of the book introduces the mathematical concept required for treating the manifolds considered providing relevant notions from topology and differential geometry An introduction to the theory of motion of curves and surfaces as part of the emerging field of contour dynamics is given The second and third parts discuss the modeling of various physical solitons on compact systems such as filaments loops and drops made of almost incompressible materials thereby intersecting with a large number of physical disciplines from hydrodynamics to compact object astrophysics This book is intended for graduate students and researchers in mathematics physics and engineering      **Analysis and Algebra**

**on Differentiable Manifolds** Pedro M. Gadea,Jaime Muñoz Masqué,Ihor V. Mykytyuk,2012-12-30 This is the second edition of this best selling problem book for students now containing over 400 completely solved exercises on differentiable manifolds Lie theory fibre bundles and Riemannian manifolds The exercises go from elementary computations to rather sophisticated tools Many of the definitions and theorems used throughout are explained in the first section of each chapter where they appear A 56 page collection of formulae is included which can be useful as an aide m moire even for teachers and researchers on those topics In this 2nd edition 76 new problems a section devoted to a generalization of Gauss Lemma a short novel section dealing with some properties of the energy of Hopf vector fields an expanded collection of formulae and tables an extended bibliography Audience This book will be useful to advanced undergraduate and graduate students of mathematics theoretical physics and some branches of engineering with a rudimentary knowledge of linear and multilinear algebra      **Foundations of Computational Intelligence Volume 2** Aboul-Ella Hassanien,Ajith Abraham,Francisco

Herrera,2009-05-27 Foundations of Computational Intelligence Volume 2 Approximation Reasoning Theoretical Foundations and Applications Human reasoning usually is very approximate and involves various types of certainties Approximate reasoning is the computational modelling of any part of the process used by humans to reason about natural phenomena or to solve real world problems The scope of this book includes fuzzy sets Dempster Shafer theory multi valued logic probability random sets and rough set near set and hybrid intelligent systems Besides research articles and expository papers on t ory

and algorithms of approximation reasoning papers on numerical experiments and real world applications were also encouraged This Volume comprises of 12 chapters including an overview chapter providing an up to date and state of the research on the applications of Computational Intelligence techniques for proximation reasoning The Volume is divided into 2 parts Part I Approximate Reasoning Theoretical Foundations Part II Approximate Reasoning Success Stories and Real World Applications Part I on Approximate Reasoning Theoretical Foundations contains four ch ters that describe several approaches of fuzzy and Para consistent annotated logic approximation reasoning In Chapter 1 Fuzzy Sets Near Sets and Rough Sets for Your Computational Intelligence Toolbox by Peters considers how a user might utilize fuzzy sets near sets and rough sets taken separately or taken together in hybridizations as part of a computational intelligence toolbox In multi criteria decision making it is necessary to aggregate combine utility values corresponding to several criteria parameters
