delves into 100 millennia of human history to create a unified and consistent explanation for humankind's inner need to spread itself across the globe. He examines key events from different eras such as the voyages of the Chinese treasure fleet, the shaping of the Aztec's trade system in MesoAmerica, the role of steam-powered transport in the supply of an English city, the rise of the gas-powered engine, and the digitization of information in the computer age, melding them together to form a framework for understanding the process of globalization. Drawing on a variety of academic disciplines including the physical sciences, biology, anthropology, geography, economics, political science, sociology, and demography, Clark reveals the spread of humans and their cultures to be part of an ongoing struggle to supply the energy needs of an increasingly large and complex society. Entropy and thermodynamics, terms often ignored or misunderstood by social science students, clearly frame a fascinating vision of humans' inherent tendency toward a globalized world. Although human expansion has drawn increasing attention in the last several decades as this tumultuous century has progressed, Clark shows that the process of globalization is not a recent concept. From the very roots of the species, humankind has been driven by a range of internal and external factors to expand in order to survive the increasing complexity of human civilization.

Biodiversity, Conservation and Sustainability in Asia Münir Öztürk, Shujaul Mulk Khan, Volkan Altay, Recep Efe, Dilfuza Egamberdieva, Furkat O. Khassanov, 2022-03-10

Of the world's seven continents, Asia is the largest. Its physical landscapes, political units, and ethnic groups are both wide-ranging, and many Southwestern, South, and Middle Asia are highly populated regions which, as a whole, cover an extremely large area of varied geography. In total, this domain is unique in its plant diversity and large vegetation zones with different communities and biomes. It is rich in endemics with specific and intraspecific diversity of fruit trees and medicinal plants, including a number of rare, high-value species. At the same time, much of the land in the region is too dry or too rugged, with many geographical extremes. Overgrazing, oil and mineral extraction, and poaching are the major threats in the area. This two-volume project focuses on the dynamic biodiversity of the region, with in-depth analysis on phytosociology, plants, animals, and agroecology. There are also chapters that explore new applications as well as approaches to overcome problems associated with climate change. Much of the research and analysis are presented here for the first time. We believe this work is a valuable resource for professionals and researchers working in the fields of plant diversity and vegetation, animal diversity, and animal populations, and geo-diversity and sustainable land use, among others. The first volume guides our readers to West Asia and the Caucasus region, while volume two focuses on issues unique to South and Middle Asia.
