Preparatory Examination For Mathematical Literacy 2014 Memorandum:

How We Teach Science John L. Rudolph, 2019-06-01 A former Wisconsin high school science teacher makes the case that how and why we teach science matters especially now that its legitimacy is under attack Why teach science The answer to that question will determine how it is taught Yet despite the enduring belief in this country that science should be taught there has been no enduring consensus about how or why This is especially true when it comes to teaching scientific process Nearly all of the basic knowledge we have about the world is rock solid The science we teach in high schools in particular laws of motion the structure of the atom cell division DNA replication the universal speed limit of light is accepted as the way nature works Everyone also agrees that students and the public more generally should understand the methods used to gain this knowledge But what exactly is the scientific method Ever since the late 1800s scientists and science educators have grappled with that question Through the years they've advanced an assortment of strategies ranging from the laboratory method to the five step method to science as inquiry to no method at all *How We Teach Science* reveals that each strategy was influenced by the intellectual cultural and political circumstances of the time In some eras learning about experimentation and scientific inquiry was seen to contribute to an individual's intellectual and moral improvement while in others it was viewed as a way to minimize public interference in institutional science John Rudolph shows that how we think about and teach science will either sustain or thwart future innovation and ultimately determine how science is perceived and received by the public

An Illusion of Equity Wendy Zagray Warren, 2023-08-01 Public education plays a crucial role in crafting a nation's future In the United States education reform policy particularly the reliance on large scale standardized testing is a growing topic of national conversation and concern *An Illusion of Equity* The Legacy of Eugenics in Today's Education demonstrates how centuries of propaganda have led us to accept the idea that test scores indicate something so valuable about human beings that they should be used to organize society Drawing on decades of experience as an educator author Wendy Zagray Warren unpacks the origins of this practice inviting us to probe the ideologies underlying testing procedures and score interpretation and to evaluate the rationale for using test scores as the sole markers for academic achievement From the beginning large scale tests have produced scores divided by race and class Initially these results aligned with the eugenic ideology of its creators Warren shows that while the

rhetoric used to justify test based policy has changed the model used to produce test scores remains much the same Therefore so do the outcomes of test based policies which continue to reproduce and reinforce the existing social hierarchy of the United States The hope of equity lies in educators charting new paths and scholars around the world who are dreaming new educational paradigms into being Ultimately Warren invites policymakers educators and parents to explore the richness of possibility when education is designed around the belief that every child is worthy of the opportunity to thrive
