*Functions, Data, and Models* Sheldon P. Gordon, Florence S. Gordon, 2025-02-24. This is a college algebra level textbook written to provide the kind of mathematical knowledge and experiences that students will need for courses in other fields such as biology, chemistry, business, finance, economics, and other areas that are heavily dependent on data, either from

laboratory experiments or from other studies The focus is on the fundamental mathematical concepts and the realistic problem solving via mathematical modeling rather than the development of algebraic skills that might be needed in calculus Functions Data and Models presents college algebra in a way that differs from almost all college algebra books available today Rather than going over material covered in high school courses the Gordons teach something new Students are given an introduction to data analysis and mathematical modeling presented at a level that students with limited algebraic skills can understand The book contains a rich set of exercises many of which use real data Also included are thought experiments or what if questions that are meant to stretch the student s mathematical thinking

Value Creation and Opportunity Management in Africa's Leather Sector Mwinyikione Mwinyihija, 2018-08-31 The scope of the study reported

in this book entails understanding the constraints and providing potential diagnostics to Africa's leather sector which is otherwise globally one of the most lucrative agro based industries in the world estimated at over US 130 Billion. One of the principle core thematic aspects of the leather sector is characteristically its long value chain with multiple socio economic dimensions. These entail employability creation of wealth gender parity and rural development. Thusly in an effort to stimulate scholarly discussion the study argues that preemptively the problems facing the leather value chain strata are high losses low value addition initiatives and unexplored opportunities that are synonymous with the Africa's leather industry. Indeed the results of the research conceptualized opportunity management as a critical panacea towards value addition strategy for the leather sector in developing countries. In dealing with this concept the book evaluated the various value chains phases and identified nine specific issues and variables drawn between value addition and the main leather strata. With this background the study posed a main question and four sub questions to closely expound on related hypotheses and in lieu pursue four thematic aspects: trade productivity competitiveness and innovation covered in twelve chapters of the book. Conclusively the book manages to successfully conceptualize as a novelty that opportunity management is integral towards developing a leather value addition strategy for the developing countries with particular emphasis to Africa.

*Quantitative Methods in Tourism* Rodolfo Baggio, Jane Klobas, 2011-03-15. Tourism studies often deal with complex mixes of external and local factors and the attitudes perceptions and actions of tourists themselves. In seeking to understand individual elements of this mix or the results of interactions between them tourism authorities managers and researchers often collect quantitative data but until now the few existing guides to understanding quantitative data have been either very simple or very complicated. This book provides a guide to dealing with real world data and goes beyond the methods usually covered in introductory textbooks. The first part considers key issues associated with using well known methods to produce valid and reliable models of real world phenomena emphasizing issues in data selection approaches to factor and cluster analysis and mathematical modelling using regression methods including logistic regression and structural equation modelling. The second part covers new approaches to modelling maximum likelihood estimation simulation and agent based modelling. Each chapter includes extensive references to additional reading and an appendix summarises the software introduced in the book. The book provides many practical examples of applications to tourism research considers practical issues associated with application of quantitative techniques and discusses common pitfalls and how to identify and remedy them. The result is a guide to quantitative methods in tourism that demystifies both simple and apparently complex techniques and makes them more accessible to tourism researchers.
