Network Security Jan Camenisch, Dogan Kesdogan, 2009-11-02 The working group WG 11 4 of IFIP ran an iNetSec conference a few times in the past sometimes together with IFIP security conference sometimes as a stand alone workshop with a program selected from peer reviewed submissions When we were elected to chair WG 11 4 we asked ourselves whether the security and also the computer science community at large benefit from this workshop In particular as there are many too many security conferences it has become difficult to keep up with the field After having talked to many colleagues far too many to list all of them here we decided to try a different kind of workshop one where people would attend

to discuss open research topics in our field as typically only happens during the coffee breaks of ordinary conferences. To enable this we called for abstracts of 2 pages where the authors outline the open problems that they would like to discuss at the workshop the intent being that the author would be given 15 minutes to present the topic and another 15 minutes for discussion. These abstracts were then read by all members of the Program Committee and ranked by them according to whether they thought this would lead to an interesting talk and discussion. We then simply selected the abstracts that got the best rankings. We were happy to see this result in many really interesting talks and discussions in the course of the workshop. Of course these lively and direct discussions are almost impossible to achieve in a printed text. Still we asked the authors to distill the essence of these discussions into full papers. The results are in your hands.

Ambient Intelligence Emile H.L. Aarts, James L. Crowley, Heinz Gerhäuser, Alexander Pflaum, Janina Schmidt, Reiner Wichert, 2008-11-14. This volume contains the proceedings of the Second European Ambient Intelligence Aml Conference. The conference took place in Erlangen and Nürnberg November 19-22 2008. The concept of ambient intelligence Aml was introduced in the late 1990s as a novel paradigm for electronic environments for the years 2010-2020. It builds on the early visions of Weiser describing a novel mobile computing infrastructure integrated into the networked environment of people. According to early definitions Aml refers to smart electronic surroundings that are sensitive and responsive to the presence of people. The added value for the multi-dimensional society we are living in lies in the fact that the large scale integration of microelectronics into the environment enables people and objects to interact with this environment in a seamless trustworthy and natural manner. Obviously Aml solutions deliver a new quality of communication and information exchange: they help people to fulfill their professional tasks with increasing efficiency, enable the older generation to stay much longer in the privacy of their own homes and the younger one to lead a healthy and responsible life. Smart mobile devices navigate in private apartments as well as in complex public or industrial environments in order to support people with a broad variety of services.
