Dunning, 2012-10-12 People base thousands of choices across a lifetime on the views they hold of their skill and moral character yet a growing body of research in psychology shows that such self views are often misguided or misinformed Anyone who has dealt with others in the classroom in the workplace in the medical office or on the therapist's couch has probably experienced people whose opinions of themselves depart from the objectively possible This book outlines some of the common errors that people make when they evaluate themselves It also describes the many psychological barriers some that people build by their own hand that prevent individuals from achieving self insight about their ability and character The first section of the book focuses on mistaken views of competence and explores why people often remain blissfully unaware of their incompetence and personality flaws The second section focuses on faulty views of character and explores why people tend to perceive they are more unique and special than they really are why people tend to possess inflated opinions of their moral fiber that are not matched by their deeds and why people fail to anticipate the impact that emotions have on their choices and actions The book will be of great interest to students and researchers in social personality and cognitive psychology but through the accessibility of its writing style it will also appeal to those outside of academic psychology with an interest in the psychological processes that lead to our self insight **Memories That Matter** Christopher R.

Madan, 2024-03-28 What makes some experiences more memorable than others How can you better remember specific information later Memories That Matter addresses these questions and more The book is divided into three main parts with each part focusing on a different aspect of memory After the introductory first part Part II discusses everyday uses of

memory and why we remember establishing a foundation for how memory is structured and stored in the brain Part III dives into what makes us remember Emotional and rewarding experiences are both more memorable than mundane experiences but are often studied using different approaches Self relevance and objects we can interact with are remembered better than less relevant information The author explores these motivation related influences on memory and considers whether a common mechanism underlies them all Part IV changes the focus discussing how we sometimes want to remember specific information that does not automatically capture our attention The book considers evidence based learning strategies and memory strategies whilst also exploring real world applications with discussion of professions that accomplish amazing memory feats daily The book concludes with a reflection on how the role of memory is changing as our world makes information increasingly accessible particularly with the ever expanding influence of the internet Drawing from a variety of literatures and perspectives this important book will be relevant for all students of memory from psychology cognitive neuroscience and related health backgrounds
