**Twenty Years of Health System Reform in Brazil** Michele Gragnolati,Magnus Lindelow,Bernard Couttolenc,2013-07-18 It has been over twenty years since the Brazilian Sistema nico de Sa de Unified Health System or SUS was formally established by the 1988 Constitution The impetus for the SUS came in part from rising costs and a crisis in the social security system that preceded the reforms but also from a broad based political movement calling for democratization and improved social rights Building on reforms that started in the 1980s the SUS was based on three overarching principles i universal access to health services with health defined as a citizen s right and an obligation of the state ii equality of access to health care and iii integrality comprehensiveness and continuity of care along with several other guiding ideas including decentralization increased participation and evidence based prioritization The SUS reform established health a fundamental right and duty of the state and started a process of

fundamentally transforming Brazil's health system to achieve this goal. So what has been achieved since the SUS was established? And what challenges remain in achieving the goals that were established in 1988? These questions are the focus of this report. Specifically, it seeks to assess whether the SUS reforms have managed to transform the health system as envisaged more than 20 years ago and whether the reforms have led to improved outcomes in terms of access to services, financial protection and health status. Any effort to assess the performance of a health system runs into a host of challenges concerning the definition of boundaries of the health system, the outcomes that the assessment should focus on, data sources and quality, and the role of policies and reforms in understanding how the performance of the health system has changed over time. Building on an extensive literature on health system assessment, this report is based on a simple framework that specifies a set of health system building blocks which affect a number of intermediate outcomes such as access, quality and efficiency, which in turn contribute to final outcomes including health status, financial protection and satisfaction. Based on this framework, the report starts by looking at how key building blocks of Brazil's health system have changed over time and then moves on to review performance in terms of intermediate and final outcomes.

**Operationalized Psychodynamic Diagnosis OPD-2** OPD Task Force, 2008-01-01 Operationalized Psychodynamic Diagnosis OPD is a form of multiaxial diagnostic and classification system based on psychodynamic principles analogous to those based on other principles such as DSM IV and ICD 10. The OPD is based on five axes: I experience of illness and prerequisites for treatment; II interpersonal relations; III conflict; IV structure; and V mental and psychosomatic disorders in line with Chapter V F of the ICD 10. After an initial interview lasting 1-2 hours, the clinician or researcher can evaluate the patient's psychodynamics according to these axes and enter them in the checklists and evaluation forms provided. The new version OPD 2 has been developed from a purely diagnostic system to include a set of tools and procedures for treatment planning and for measuring change, as well as for determining the appropriate main focuses of treatment and developing appropriate treatment strategies.

Several years ago when the Carter administration announced that it would support congressional action to end the public funding of abortions the President was asked at a press conference whether he thought that such a policy was unfair he responded Life is unfair His remarks provoked a storm of controversy For other than those who for principled reasons opposed abortion on any grounds it seemed that the President's comments were cruel violating what was thought to be an American commitment to providing equal access to health services to all citizens regardless of their capacity to pay Those sentiments had in fact been reflected in public opinion polls that had for at least three decades indicated that Americans supported the proposition that the government should guarantee health care to all Ultimately those beliefs had been translated into the oft expressed political demand for a one class system of health care This commitment to equality is rather remarkable American society evidences a striking willingness to tolerate vast inequalities with regard to income and wealth While it guarantees education to all children there is not even a pretense that the children of the wealthy and the children of the poor ought to get precisely the same kind of schooling While some commitment Hazel Erskine The Polls Health Insurance Public Opinion Quarterly XXXIX Spring 1975 128 143 Health Care and Reform in Industrialized Countries Marshall W.
