the latest techniques in production planning and control are applied to contemporary industrial setups so as to meet the ever
increasing demands in industrial organizations for better quality of services for faster delivery of products and for adapting
to the rapid changes taking place in the industrial scenario With the demands in the industrial arena increasingly tending to
be lumpy the most effective strategy for planning and controlling production processes cannot be a static preconceived one
Instead it is one that is flexible and is capable of adapting to the erratic changes in demand patterns Evolving such a strategy
requires more of practical skill than mere theoretical knowledge of the subject This book explores the demands of the
present day industrial environment and the techniques for addressing these demands through a number of case studies
drawn from Indian industries The efficacy of various planning strategies the methods for implementing them and their
suitability for different industries have been clearly explained in relation to these cases While the essentials of theory have
been covered in a simple and straightforward style the stress is on developing the practical skills required to tackle the
unpredictable problems and the unforeseen demands that pose a formidable challenge to modern industries The book places
emphasis as much on the principles of heuristic techniques as on the systematic approach to production planning This book
