efficient linear programming algorithm enables the computation of this metric fast enough to be used for the interactive retrieval of images from large repositories The perceptual properties of the EMD and the speed of its computation lead to database navigation a new paradigm for interacting with a repository of images When navigating the user is shown a very large number of images in response to a query The EMD between pairs of images together with a multidimensional scaling method allows these images to be displayed so that similar images appear near to each other on the computer screen In this way the user can grasp at a glance what is returned and can reach the images of interest with a small number of mouse clicks Extensive benchmark evaluations and example retrieval systems show the usefulness of the EMD and the advantages of image database navigation This book will be of interest to researchers industrial professionals and graduate and post graduate students in the fields of Computer Vision Image Processing Data Mining Digital Libraries Psychophysics Computer Science Electrical Engineering
