*Research and Technology Program Digest* United States. National Aeronautics and Space Administration, Analysis, Design and Evaluation of Man - Machine Systems G. Johannsen, J. E. Rijnsdorp, 2014-05-16 Analysis Design computer aided control station with coloured display for production control dynamic and static models for nuclear reactor operators ironies of automation and theory and validation of model of the human observer and decision maker The operation simulation for the evaluation and improvement of a medical information system are fully covered An in depth account of an online information retrieval through natural language is provided The control of input variables by head movements of handicapped persons is completely presented A chapter is devoted to a graphical hardware description language for logic simulation programs Another section focuses on the symbiotic knowledge based computer support systems The book can provide useful information to computer programmers engineers students and researchers *NASA Tech Briefs*, 1980 *U.S. Government Research Reports*, 1964 *Structronic Systems: Smart Structures, Devices And Systems (In 2 Parts)* Ardeshir Guran, Horn-sen Tzou, Gary L Anderson, Michihiro Natori, Ulrich Gabbert, Junji Tani, Elmar Breitbach, 1998-04-04 This book is concerned with electrostructural systems particularly the interaction between the control of the structural and electrical electronic components Structronics is a new emerging area with many potential applications in the design of high performance structures adaptive structures high precision systems and micro systems As structures are increasingly being controlled by electronics the problems of structural engineering can be separated less and less from those of electronic engineering and control engineering This graduate level book fills a gap in the literature by considering these problems while giving an overview of the current state of analysis modelling and control for structronic systems It is a coherent compendium written by leading experts in this new research area and gives readers a sophisticated toolbox that will allow them to tackle the modelling and control of smart structures The inclusion of an extensive up to date bibliography and index makes this volume an invaluable standard for professional reference Because of the large number of contributions to the present volume it has been subdivided into two parts of which this is Part I This book will be of interest to engineers materials scientists physicists and applied mathematicians The synergistic integration of active smart materials structures sensors actuators and control electronics has redefined the concept of structures from a conventional passive elastic system to an active life like structronic structure electronic system with inherent self sensing diagnosis and control capabilities Because of its multi disciplinary nature the development of structronic systems has attracted researchers and scientists from many disciplines such as structures materials control electronics mathematics manufacturing electromechanics and mechanics In practical applications this new structronic system can be used as a component of high performance machines or structural systems or be an integrated structure itself performing designated functions Most common active smart materials such as piezoelectrics shape memory alloys electro and magneto strictive materials and polyelectrolyte gels have been reviewed in Part I

Application examples are also provided and research issues reported on While the first part focuses primarily on materials and structures Part II emphasizes control applications and intelligent systems With the information provided in this two volume book scientists and researchers can easily grasp the state of the art of smart materials and structronic systems and are ready to pursue their own research and development endeavors **Aerospace Medicine and Biology** ,1982

**Trends in Control and Decision-Making for Human-Robot Collaboration Systems** Yue Wang,Fumin

Zhang,2017-01-24 This book provides an overview of recent research developments in the automation and control of robotic systems that collaborate with humans A measure of human collaboration being necessary for the optimal operation of any robotic system the contributors exploit a broad selection of such systems to demonstrate the importance of the subject particularly where the environment is prone to uncertainty or complexity They show how such human strengths as high level decision making flexibility and dexterity can be combined with robotic precision and ability to perform task repetitively or in a dangerous environment The book focuses on quantitative methods and control design for guaranteed robot performance and balanced human experience from both physical human robot interaction and social human robot interaction Its contributions develop and expand upon material presented at various international conferences They are organized into three parts covering one human one robot collaboration one human multiple robot collaboration and human swarm collaboration Individual topic areas include resource optimization human and robotic safety in collaboration human trust in robot and decision making when collaborating with robots abstraction of swarm systems to make them suitable for human control modeling and control of internal force interactions for collaborative manipulation and the sharing of control between human and automated systems etc Control and decision making algorithms feature prominently in the text importantly within the context of human factors and the constraints they impose Applications such as assistive technology driverless vehicles cooperative mobile robots manufacturing robots and swarm robots are considered Illustrative figures and tables are provided throughout the book Researchers and students working in controls and the interaction of humans and robots will learn new methods for human robot collaboration from this book and will find the cutting edge of the subject described in depth
