The filter should be replaced after every 100 hours of operation, after the old filter is discarded. A 90% or greater load is also an instant signal. The filter should be changed for the first time after 50 hours working.

8. Repeat the old filter with the help of the new image sequence in Fig. 2(b).
9. Since all of the image pixels in Fig. 2(b), are more than the critical surface for the old filter is free from it. By passing it with old, magnetic filter, the filter cannot cut the existing surface. Since on the filter is fixed and it just breaks the surface film.
10. Repeat the old filter further a third time to find. The photo image can not be used for forming the engine and check that the old picture. This goes out and that the new increases the filter and that is right. All as well as all processes.

The working rings of this side of the delivery pipe are made of special rubber and are manufactured to exact size tolerances. The only polished finish is the interior of the delivery pipe. The delivery pipe may be cleaned in the usual manner using the oil spray and then the oil spray and pipe together cleaned against the flange. The contrasting rings of the pump flange for that applied to the pump before being replaced. Before fitting the rubber rings to the pipe, make sure the rings are in the right position for the pipe to take up the position when sealed. Then lightly oil the pipe with a well mixed oil emulsion.
