Halevi, 2013-04-17 Process planning determines how a product is to be manufactured and is therefore a key element in the manufacturing process It plays a major part in determining the cost of components and affects all factory activities company competitiveness production planning production efficiency and product quality It is a crucial link between design and manufacturing In spite of the importance of process planning in the manufacturing cycle there is no formal methodology which can be used or can help to train personnel for this job Process planning activities are predominantly labor intensive depending on the experience and the skill and intuition of the planner and therefore often precludes a thorough analysis and optimization of the process plan which nearly always results in higher than necessary production costs delays errors and non standardization of processes Process planning is regarded as an art and not a science Research in the field of process planning has indicated that all experts have their own expertise and one expert's experience might be different from that of another It is rare therefore for two planners to produce the same process Each process will produce the part as specified although different processes will result in different processing times and costs The question is who is an expert By definition an expert is one having or manifesting the knowledge skill and experience needed for success in a particular field or endeavor or one who has acquired special skill in or knowledge and mastery of something *CNC milling and turning in model making* Christoph Selig, Computer controlled production has also become indispensable in model making Not only industrial manufacturers but also more and more model makers themselves are using CNC controlled machines to produce parts In this book Christoph Selig initiates you into the secrets of CNC milling and for the first time CNC turning He comprehensively covers the hardware the software and the machine tools The subject is the basics but above all the practice of conversion and CNC controlled manufacturing so that the reader gets a complete insight into this fascinating technology which in some cases revolutionises model making From the content Why CNC technology for the hobby sector Axis drives The control types Stepper motors Construction and operation of the stepper motor control SRS 1X035 The Mach3 control software Useful accessories The practice Generating the CNC programme Generating G code from DXF or HPGL From the idea to the finished part Milling technology Turning technology Practical examples Milling Practical example turning The CNC milling machine as a drawing machine Manual GCode programming M-128D Operating
