laser printer replaced the previous photomechanical processes of printing and was a transformative achievement. It was both the product of and a catalyst for the intellectual, social, and political changes during the digital revolution that will extend for generations into the future. This book discusses these two bookends in the age of print. It follows the transitions and stages of innovation in printing between the fifteenth and twenty-first centuries and shows how the inventors responsible for this progress are bound together in a chain of revolutionary technical change called disruptive continuity. While the works of Gutenberg and Jobs are separated by more than five centuries, there are striking parallels and differences between these two innovations. They both sparked the quantitative expansion of literacy and the spread of knowledge around the world. However, the emergence of electronic publishing, especially in its present-day social media forms, has brought a vast increase in the consumption of information while also heralding a qualitative transformation that places the tools of wireless and mobile multimedia publishing into the hands of billions of people on earth. Much in the same way that there was a historical lag between Gutenberg's invention and the full impact of printing on the world, so too in our own time the long-term societal consequences of electronic publishing have yet to be realized.
