

# Introduction

Chapter 1 introduces the general topic of operating systems and a handful of important concepts (multiprogramming, time sharing, distributed system, and so on). The purpose is to show *why* operating systems are what they are by showing *how* they developed. In operating systems, as in much of computer science, we are led to the present by the paths we took in the past, and we can better understand both the present and the future by understanding the past.

Additional work that might be considered is learning about the particular systems that the students will have access to at your institution. This is still just a general overview, as specific interfaces are considered in Chapter 3.

## Exercises

- 1.12** In a multiprogramming and time-sharing environment, several users share the system simultaneously. This situation can result in various security problems.
- What are two such problems?
  - Can we ensure the same degree of security in a time-shared machine as in a dedicated machine? Explain your answer.

### Answer:

- Stealing or copying one's programs or data; using system resources (CPU, memory, disk space, peripherals) without proper accounting.
  - Probably not, since any protection scheme devised by humans can inevitably be broken by a human, and the more complex the scheme, the more difficult it is to feel confident of its correct implementation.
- 1.13** The issue of resource utilization shows up in different forms in different types of operating systems. List what resources must be managed carefully in the following settings:
- Mainframe or minicomputer systems.

Subramanya, This book is a self assessment book quiz book It has a vast collection of over 2 500 questions along with answers The questions have a wide range of difficulty levels They have been designed to test a good understanding of the fundamental aspects of the major core areas of Computer Science The topical coverage includes data representation digital design computer organization software operating systems data structures algorithms programming languages and compilers automata languages and computation database systems computer networks and computer security **Fundamentals of Information Security** Mr. Rohit Manglik, 2024-03-07 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels Collective Bargaining for Police and Other Essential Services Giuseppe Carabetta, 2024-10-14 This book examines how collective bargaining disputes are resolved among police and essential service employees In Australia as in other common law countries police and other highly essential employees such as fire fighters and ambulance officers have long had access to a form of binding arbitration to settle collective bargaining disputes The traditional arbitration based system in Australia has however been replaced in recent decades with a marked based collective bargaining system The current Fair Work system restricts access to arbitration favouring collective bargaining based on the parties prerogative to make their own agreements and supported by a limited right to industrial action including strikes during bargaining Yet police officers particularly are subject to considerable restraints on any entitlement to participate in industrial action The problem is that with limited access to arbitration and an especially limited right to industrial action intractable disputes may continue indefinitely without any impasse breaking process to prevent the flow on harms of long running police disputes This raises the essential question underpinning this study what form of dispute resolution system is appropriate to protect both the legitimate industrial interests of police

officers and the community's interest in the uninterrupted provision of essential policing services The author in his extensive field work research and his study of international case studies has developed a useful model for mandatory interest arbitration among police and other essential services personnel The lessons and recommendations in the book offer insights for essential services labour law in Australia and overseas
