Proceedings of the 4th International Conference on Informatics, Technology and Engineering 2023 (InCITE 2023) Markus Hartono, Hudiyo Firmanto, Connie Susilawati, 2023-11-18. This is an open access book. Adaptive Resilient Collaborative Engineering Towards Faster Recovery Impactful Solutions. The world in the last decade has been facing global issues such as accelerated global warming, depleting natural resources, food waste, and scarcity, water contamination, and shortage, energy conservation, etc. Enter the COVID-19 pandemic in 2020, and we face what people term as double disruption. Not only solutions to the above problems are becoming more critical, but they are also needed fast. Timely and effective solutions are called for so that we can recover from the pandemic while at the same time carry our efforts to better our world. It is no longer sufficient to find solutions that can only delay the negative impacts from the above problems, but it is imperative to tip the balance and reverse the impacts to our advantage. Engineers and engineering have a vital role in inventing mechanisms, systems, and/or products that can address the solutions. Digital technologies and artificial intelligence have been at the forefront of such exploration, and we can expect some hints for a better future if we continue being adaptive, resilient, and collaborative. Given the above background, Faculty of Engineering Universitas Surabaya will host the fourth bi-annual international conference, The 4th International Conference on Informatics, Technology and Engineering 2023 InCITE 2023, in Yogyakarta, Indonesia, September 14th-15th, 2023. This event is a continuation of the past events successfully held in 2017, 2019, and 2021. We invite academia and business practitioners all around the globe to share ideas and best practices relevant to the above conference topic. We hope that this event can also serve as a platform of gathering for anyone interested in exploring potential solutions of our common problems today. Accepted and presented papers will be submitted for publication in reputable International Proceedings Atlantis Press. See you in Yogyakarta.

The ASQ Supply Chain Management Primer James P. Russell, 2013-11-27. This primer was written to promote the application of basic and sound supply chain management principles. It was written for a global audience of practitioners and their managers. Authors and reviewers were chosen from around the world to capture these accepted methods used in national and international commerce. Most of the described methods come from decades of use in quality management programs. They are equally important when managing for environment, safety, security, and sustainability. They are basic. The global economy has

presented both a challenge and an opportunity for organizations to better manage their supply chains. An organization's supply chain has come to be viewed as more like a supply web because an organization has a complex network of customers, distributors, wholesalers, suppliers, first tier, second tier, and sometimes third tier, and includes logistics, transportation, and warehousing. This primer draws content from experts in the field and was blended into a useful tool for you to use managing your organization's supply chain. It covers key supply chain topics like supply chain and logistics management processes, defining organizational needs and requirements, identifying supply network sources, building relationships, awarding contracts, and managing supplier performance. Creating an effective supply chain is key to staying ahead in today's complex global economy. This primer provides the tools, guidance, and examples to help maximize business performance and create competitive advantage for your organization.

Supply Chain Coordination Mechanisms Martin Albrecht, 2009-09-18
Integrated supply chain planning is well understood by theory and widely applied in practice; however, only with respect to intra-organisational supply chains. In inter-organisational supply chains, an additional yet unresolved problem arises due to confidentiality reasons: decentralized parties keep their local data private, which prevents an integrated planning. Local planning procedures such as upstream planning, which are usually applied, then result in suboptimal solutions for the supply chain as a whole. In this work, new mechanisms for inter-organizational collaborative supply chain planning are presented. These mechanisms are able to identify the systemwide optimum for several classes of supply chain planning problems. They can be applied by two or more self-interested parties and do not require a trusted third party. Extensive computational tests for randomly generated and real-world data suggest a favorable performance of these mechanisms.
